Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Chapter-1: Model Curriculum Background

This curriculum document outlines the structure of the Medical Radiology and Imaging Technology training program, the knowledge and skills expected from the graduates at various levels. It also enumerates the nature of the various examinations and assessments that planned throughout the training program.

The aims of the recommended curriculum are to produce MRIT'S who are

- Technically and clinically competent;
- Aware of radiation safety issues and the importance of quality assurance;
- Understand the theoretical basis for evidence based practice;
- Effective members of the multidisciplinary team;
- Prepared to participate in or initiate research into practice;
- Can work according to registration requirements on the respective continents.

All aspects of medical radiological and imaging technology have been considered in the development of this curriculum together with the identification of the roles expected for different levels of MRIT'S based on their qualification and experience.

The need for connecting the dots between the education and employment practices has been the road map for devising this curriculum.

Foundation course has also been designed to bring all the students at the same level of understanding with respect to basic healthcare related norms before the start of a career in a healthcare professional course. The foundation course is mandatory for all the allied and healthcare professional courses and for both entry level courses – diploma as well as degree. If a diploma holder has completed the foundation course and is willing to pursue the degree course, the candidate will directly get entry for next semester, however a pre- qualifier skill test will have to be satisfactorily completed, if not, then the candidate will have to undergo the first semester of foundation course again.

Introduction:

Learning Objectives:

Bachelor in Medical Radiology and Imaging Technology (BMRIT) program is to provide students with a high quality, well-rounded educational experience which results in graduates who possess the knowledge, skills and abilities to enter the field of diagnostic imaging as entry-level MRITs.

Graduates of the BMRIT program will be able to demonstrate the necessary skills to integrate the theoretical knowledge and essential clinical skills to perform radiography, radiological and imaging procedures including interventional procedures with utmost radiation safety measures as well as to provide exemplary patient care in a variety of healthcare settings with diverse patient populations.

The objectives of the program are to:

- Provide the profession and community with trained qualified MRITs.
- Provide education a comprehensive program that promotes problem solving, critical thinking and communication skills in the clinical environment.
- Students will demonstrate quality patient care skills including professionalism and ethical behaviors as specified in the code of ethics.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

- Provide graduate students with specific skills necessary making them to be competent at entry level.

Expectation from the future graduate in the providing patient care.

- Should be able to undertake all radiological and imaging procedures independently or as a key team member wherever required.
- Able to do the image processing.
- Should be able to handle all radiological and imaging equipment independently.
- Should ensure radiation protection and quality assurance.
- Undertake care and maintenance of all radiological and imaging equipment.
- Able to evaluate images for technical quality.
- Able to identify and manage emergency situations.
- Able to receive and document verbal, written and electronic orders in the patient's medical record.
- Should have computer skills.
- Should be able to provide empathetic professional patient care.
- Able to demonstrate professional growth, sense of professionalism and desire to learn.
- Able to demonstrate the core values of caring, integrity and discovery.
- To exhibit keen interest, initiative & drive in the overall development of the Department and 'Leadership Qualities' for others to follow.
- He / She are expected to be confident and to perform all the duties diligently with utmost sincerity and honesty.

Eligibility for admission Selection procedure:

He/she has passed the Higher Secondary (10+2) or equivalent examination recognized by any Indian University or a duly constituted Board with Physics, Chemistry, Biology

OR

Candidates who have studied abroad and have passed the equivalent qualification as determined by the University will form the guideline to determine the eligibility and must have passed in the subjects: Physics, Chemistry, Biology and English up to 12th Standard level.

OR

Candidates who have passed the Senior Secondary school Examination of National Open School with a minimum of 5 subjects with any of the following group subjects.

English, Physics, Chemistry, Botany, Zoology

English, Physics, Chemistry, Biology and any other language

- He/she has attained the age of 17 years as on or before the 31st December of the year of admission) & maximum age limit is 30 years.
- He/she must furnish at the time of submission of application form, a certificate of Physical fitness from a registered medical practitioner and two references from persons other than relatives testifying to satisfactory general character.

Admission to Bachelor Medical Radiology and Imaging Technology course shall be made based on eligibility and an entrance test to be conducted for the purpose.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Duration of the course

Duration of the course: 3 years (6 semesters) + 1 year (7th and 8th semester) internship. Total 4 years or 8 semesters programme. (Per semester 640 hours of Theory & Practical hours) and 2400 hours of internship.

Total hours of the course: 6240 hours.

Medium of instruction:

English shall be the medium of instruction for all the subjects of study and for examination of the course.

Maximum period for completion of the course:

- The maximum period for completion of BMRIT is 7 years.
- If a candidate does not complete within the 6 years, he/she should re-register.

Attendance and Monitoring progress of studies:

- A candidate shall study in concerned department of the Institute for the entire period as a full time student.
- A candidate who has a minimum of 75% attendance in theory and practical separately and who has fulfilled other requirements of the course shall be permitted to appear for examination.
- A candidate having shortage of attendance shall repeat the exam when it is offered next.

Assessment and Evaluation Scheme of Evaluation

- The academic performance is assessed on the basis of both Continuous Internal Evaluation (CIE) assessment and End Semester Examination (ESE) in each semester.
- ESE weightage will be in the ratio of 30 % for CIE and 70 % for ESE.

Continuous Internal Evaluation (CIE)

- 30% of the total marks are allotted for CIE in each course.
- 50% of CIE shall be based on the average of marks obtained in two notified formative written tests. Absence without prior permission for a formative test shall result in scoring of the test as zero.
- The remaining 50% of CIE will be based on internal assessments in the form of evaluation seminars, journal club presentations, case presentations, completion of assignments etc. which will be specified in the individual course curricula.
- CIE will be conducted for theory and practical for each course wherever applicable.
- A Candidate must secure at least 40% of total marks fixed for CIE in the particular subject in order to be eligible to appear for the End Semester Examination (ESE) for that subject.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Evaluation System

Continuous Internal Evaluation (CIE)

Sl. No.	Component	Marks	Weightage	IA marks
1.	Sessional test(s)			
	Two Written tests Same pattern as Summative test Average of two to be considered Absence without prior permission to be marked as 0	50		
	Total	50	0.3	15
2.	Continuous assessment			
	Seminars/Case presentations/ Logbook/Case records/Record book/assignment			
	Total	50	0.3	15
	Total CIE marks			30

End semester examination (ESE)

- There shall be a University Examination at the end of each semester.
- To be eligible to appear for University examination a candidate should fulfill all the following conditions
- Undergone satisfactorily the approved program of study in the course/courses for the prescribed duration
- 75% attendance separately in theory and in practical/hospital postings, in each course
- Shall have the minimum attendance requirement in all courses of that semester for the first appearance
- Secure at least 50% of total marks fixed for CIE in a particular course; and
- Fulfill any other requirement that may be prescribed by the University from time to time.
- The End semester examination will consist of Theory examination for all courses and in addition, Practical examination for specified courses.
- Theory examination
- Written tests with question types, pattern, duration and weightage as specified in the Course-wise curricula
- Setting of question papers and evaluation of answer scripts as per University regulations

Practical examination

- Broad outline would be in the form of Spotters, Demonstration of equipment handling, Case based discussions.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

End Semester Evaluation (ESE)

Written Paper

Type of question	No. of questions	Marks per question	Total
Multiple choice type	10 (to answer 10)	01	10
Short Essay Question (SEQ)	8 (to answer 6)	05	30
Long Answer Question (LAQ)	5 (to answer 3)	10	30
Total marks			70
Duration (minutes)			180

Teaching Scheme (In Hours)			Total Credits (L+T+P)	Examination Scheme
L	T	P	C	
-	-	-	-	Institute level exam only: The Institute level examination will be held before the commencement of the University examinations. A Pass in the subject with a minimum of 50 marks (50% of the total 100 marks) is compulsory in order to be eligible for the award of degree. These marks will not be considered for the award of class. Supplementary examination shall be conducted by the Institute for the benefit of unsuccessful candidates. Supplementary examinations will be conducted within six weeks/six months from the date of Announcement of results.

End Semester Evaluation (ESE)

There shall be practical examination for 70 marks in the subject.

Distribution of marks for ESE practical exams:

ESE		CIE		Grand total
Practical	Viva		Sub Total	
50	20	30	100	100

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Criteria for pass:

A Candidate must score 50% separately in theory and practical wherever applicable to be declared as pass. In case of fail, subsequently a candidate has to appear for both theory and practical examination of the university in that particular course.

Attendance and appearance for Exam:

Candidates not possessing required attendance in a particular course as prescribed by University will not be allowed to take up examinations and has to appear for supplementary examination whenever board conducts exam for the particular course very next time.

Structure of the program

Foundation courses (12 credits)	<ol style="list-style-type: none">1. Human Anatomy2. Physiology3. Pathology4. Basics of Microbiology5. Basics of Biochemistry
Core courses (109 credits)	<ol style="list-style-type: none">1. Basics of Radiation Physics2. Conventional Radiography and Equipment3. Clinical Radiography Positioning (Part 1)4. Clinical Radiography Positioning (Part 2)5. Radiography and Image Processing Techniques6. Contrast Media and Special Radiological procedures7. Cross Sectional Anatomy8. Modern Radiological Imaging Equipment and Physics9. Interventional Radiology Techniques10. Patient Care in Radiology11. Basics Techniques in CT Technology12. Radiation safety in Diagnostic Radiology13. Quality Assurance in Diagnostic Radiology and Regulatory Requirements14. Basics Techniques in MRI Technology15. Introduction to Nuclear Medicine Techniques16. Ultrasound Techniques
Programme Courses (09 Credits)	<ol style="list-style-type: none">1. Introduction to Healthcare2. Medical Terminology and Record Keeping3. Basic Computers and Information Science4. Medical Law and Ethics5. Professionalism and Values6. Principals of Management7. English and Communication Skills8. Biostatistics and Research Methodology
40 Credits	Internship
Total credits: 170	

Distribution of Credits:

L- Lectures- 1 hour: 1 credit
T – Tutorial- 1 hour: 1 credit
P – Practical- 2 hours: 1 credit
Clinical (Studentship) - 3 hours: 1 credit

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Studentship or observer ship must include:

- A minimum of 14 hours per week is considered as studentship in every semesters.
- Provide simulation and skill labs for practicing skills specific to the program in the initial years of observership/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Teaching and Examination Scheme
Course Name: Bachelor in Medical Radiology and Imaging Technology
Duration of Program: Four Years (8 Semesters) Pattern: Full Time Rotatory Internship Semester: Seventh & Eighth (4th year)
Internship: minimum 2400 hours (calculated based on 8 hours per day for one year of internship)

Every candidate after passing all semesters examination is required to undergo compulsory internship to the satisfaction of the college authorities and University for a period of 1 year as to be eligible for the award of the degree. The internship is partial fulfillment of the requirements for the graduation and no candidate shall be declared to have completed the program otherwise. The internship shall be completed within 18 months of the date of passing final examination.

Students must undertake the rotational postings during which students have to work under supervision of an experienced staff in the following areas:

Postings	Duration
1. Conventional Radiography, Mammography, CR, DR and PACS	4 month
2. Radiological Imaging & Special Procedures	
3. and Advanced Equipment	2 month
4. Ultrasonography & Doppler Imaging	1 month
5. Interventional Radiology	1 month
6. Computed Tomography	2 months
7. Magnetic Resonance Imaging	2 months

Assessment of Internship

The intern shall maintain a record of work which is to be verified and certified by the faculty under whom he/she works. Apart from scrutiny of the record of work, assessment and evaluation of training shall be undertaken by an objective approach using situation tests in knowledge, skills and attitude during and at the end of the training.

Based on the record of work and date of evaluation, the Head of the Institution/hospital will issue a certificate of satisfactory completion of training, following which the University will award the BMRIT degree or declare him eligible for it.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

GUIDELINE FOR INTERNSHIP

RATIONALE

The Clinical Education is designed for the students to familiarize them with the applications of radiography, mammography, radiological special procedures, CT, MRI and advanced imaging techniques etc. Student should be able to reliably perform all non-contrast plain radiography as well as contrast radiological and imaging procedures along with Radiologist.

COMPETENCY

Identify the Anatomy to be imaged, properly position the patient for Imaging, Correctly select appropriate projection/projections to demonstrate the area of interest Use appropriate radiographic/radiological and imaging parameters.

COURSE OUTCOMES

- On completion of this subject, the student should be able to:
- Correctly Identify the Anatomy to be imaged
- To properly position the patient for radiography/Radiological and Imaging procedures
- Correctly select appropriate projection/projections to demonstrate the area of interest
- Use appropriate radiographic parameters to produce a radiographic image with satisfactory results
- Should be able to differentiate a properly positioned and exposed radiographic image from a wrongly positioned and over or underexposed radiographic image.
- Should be able to correctly identify anatomical features displayed in radiographic image obtained.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

LIST OF PRACTICALS/ EXERCISES/ASSIGNMENTS/CASE STUDIES

Students have to do hands on practice on following Techniques:	
Exp. No.	Name of Practical/ Exercise/ Assignment/ Case Study
Seventh Semester	
1	Radiation Physics
2	Radiographic Positioning
3	Conventional Radiography and Equipment
4	Contrast Media& Special Radiological/ imaging procedures
5	Interventional Radiology/ imaging techniques
6	Patient Care in Radiology
Eighth Semester	
7	Basics Techniques in CT Imaging Technology
8	Radiation Safety in Diagnostic Radiology
9	Quality Assurance in Diagnostic Radiology and Regulatory Requirements
10	Basics Techniques in MRI Imaging Technology
11	Introduction to Nuclear Medicine Techniques* (if facility available)
12	Ultrasound Techniques

GENERAL GUIDELINES FOR CLINICAL EDUCATION (INTERNSHIP)

The Institutes/Hospitals/Diagnostic Centers can be Government, Public limited, private enterprises or ownership.

TRAINING AREA:

Students should be trained in Large and Medium scale Hospitals/Diagnostic Centers. However, despite the best efforts by the Institute, if large and medium scale Hospitals/Diagnostic Centers are not available to all students then, students can also be placed in Small scale Institutes/Hospitals/Diagnostic Centers approved by the NCAHP competent body.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Skill Knowledge Partner (SKP): To be identified by the Institute as per their programme areas like.

- ✓ Government Hospitals.
- ✓ Corporate Hospitals
- ✓ Private Hospitals
- ✓ Diagnostic Centers
- ✓ Any other relevant industry

Note: All these needs to be approved by the NCAHP competent body.

SKILL KNOWLEDGE PARTNER (SKP)

- Helping institute in developing the following competencies among students.
- Soft Skills i.e. Communication, Presentation and others.
- Life Skills i.e. Time management, Safety, Innovation, Entrepreneurship, Team building and others
- Hands-on Practices i.e. Patient Safety, Radiography/Radiological and Imaging and Quality Assurance aspects.

ROLE OF PARENT DEPARTMENT OF THE INSTITUTE

1. Student and mentor allocation as per the slots available for Hands on training (Desirable mentor-student ratio is 1:10).
2. Communication with Institutes/Hospitals/Diagnostic Centers available for training along with capacity and its confirmation.
3. Student enrollment for training.
4. Issuing letter to the Institutes/Hospitals/Diagnostic Centers for the training along with details of students and mentors.
5. Principal/ HOD/ Faculty should address students about safety norms, rules and discipline to be maintained in the Institutes/Hospitals/Diagnostic Centers during the training before relieving students for training.
6. The designated faculty member would visit the Institutes/Hospitals/Diagnostic Centers periodically to check the progress of the student in the training, his/ her attendance, discipline, log book preparation & project report preparation
7. Mentors to carry out progressive assessment of the students during the training through Continuous Internal Evaluation (CIE), End Semester Examination (ESE) assessment by mentor along with Institutes/Hospitals/Diagnostic Centers expert as external examiner.

ROLES AND RESPONSIBILITIES OF THE STUDENTS

Following should be informed to students in the letter deputing them for the training; an undertaking for this should also be taken from them

- Students would interact with the mentor to suggest choices for suitable Institutes/Hospitals/Diagnostic Centers. If students have any contact in Institutes/Hospitals/Diagnostic Centers (through their parents, relatives or friends) then same may be utilized for securing placement for themselves and their peers.
- Students have to fill the forms duly signed by authorities along with training letter and submit it to training officer in the Institutes/Hospitals/Diagnostic Centers on the first day of training. Student should

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

also carry with him/her the Identity card issued by institute during training period.

- He/she will have to get all the necessary information from the training officer regarding schedule of the training, rules and regulations of the Institutes/Hospitals/Diagnostic Centers and safety procedures to be followed. Student is expected to observe these rules, regulations, procedures.
- Students should know that if they break any rule of Institutes/Hospitals/Diagnostic Centers or do not follow the discipline then Institutes/Hospitals/Diagnostic Centers can terminate the training and send back the student.
- It is the responsibility of the student to collect information from Institutes/Hospitals/Diagnostic Centers about Radiography/Radiological & Imaging procedures/ Patient Safety /work ethics/professional practices/organizational structure etc.
- During the training period students have to keep daily record of all the useful information in Log book along with the time and date and type of Radiography/Radiological & Imaging procedures, how it was performed with patient's history any difficulty encountered.
- Maintain the Diary/Logbook and get it signed from mentor as well as Institutes/Hospitals/Diagnostic Centers Training in-charge.
- In case they face any major problem in industry such as an accident or any disciplinary issue then they should immediately report the same to the institute.
- Prepare final report about the training for submitting to the department at the time of presentation and viva-voce and get it signed from mentor as well as Institutes/Hospitals/Diagnostic Centers training in-charge.

2. FORMAT FOR TRAINING REPORT

Following is the suggestive format for the training report; actual format may differ slightly depending upon the nature of Institutes/Hospitals/Diagnostic Centers. The training report may contain the following

- Title page
- Certificate
- Abstract
- Acknowledgement
- Content Page with date and time start and end

CHAPTER (1-10)

1. Organizational structure of Institutes/Hospitals/Diagnostic Centers and General Lay Out
2. Introduction of Institutes/Hospitals/Diagnostic Centers (History, Facilities available specialization and number of employees etc.
3. Types of major equipment/instruments/ machines used in Radiology with their specification approximate cost and specific use and their routine maintenance.
4. Standard Operating procedures.
5. Quality assurance and radiation safety procedures.
6. Equipment handling and procedures.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

7. Safety procedures followed
8. Particulars of Practical Experiences in Radiology and Imaging
9. Short report/description of the project (if any done during the training)
10. Special/challenging experiences encountered during training if any (may include students linking liking & disliking of work places) References /Bibliography.

SUGGESTED LEARNING STRATEGIES

Students should visit the website of the Institutes/Hospitals/Diagnostic Centers where they are undergoing training to collect information about Facilities, Specialization, capacity, number of employees, etc. They should also refer the operating manuals of the major machines and operation, testing, quality control and standard operating procedures and practices used in the Radiology. Students may also visit websites related to other similar industries as their learning resource. The training activity may vary according to nature and size of Institutes/Hospitals/Diagnostic Centers. The details of activities to be completed during 6 months should be planned appropriately. The evaluation of Clinical Education (Internship) will be done on the basis of skills acquired by the student during this 6 months period.

ASSESSMENT SCHEME FOR CLINICAL EDUCATION (INTERNSHIP)

Training duration	CONTINUOUS INTERNAL EVALUATION (Weekly report of all 6 months and attendance)		END SEMESTER ASSESSMENT (Practical and Oral)		Total marks	
	Max. marks	Min. marks	Max. marks	Min. marks	Max. marks	Min. marks
6 months	100	50	100	50	200	100

EVALUATION SHEET FOR CONTINUOUS INTERNAL EVALUATION

Sr. No.	Enrollment Number	Name of Student	Seminar/presentation in workshop or conference	Marks by Supervisor	Marks by Mentor Faculty	Total Marks
			Out of 40 (A)	Out of 30 (B)	Out of 30 (C)	Out of 100 (A+B+C)

Marking criteria for seminar/presentation at workshop/conference and marking criteria for supervisor/mentor faculty mentioned in the log book template.

Handwritten signatures and initials at the bottom left of the page.

Handwritten initials in the center of the page.

Handwritten signature and initials at the bottom right of the page.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

DISTRIBUTION OF END-SEMESTER-EXAMINATION (ESE*) MARKS

Marks for Training Report	Marks for Practical's	Marks for Oral/Viva-voce	Total ESE marks
25	25	50	100

Practical (25 marks) must include minimum two practical related demonstration in front of the internal examiners.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

SEMINAR EVALUATION FORM

Evaluation of Seminar

Sl. No	Criteria	5 Excellent	4 Good	3 Average	2 Below Average	1 Poor
1.	Content of the Presentation					
2.	Aesthetic of slides preparation					
3.	Oratory & Presentation Skills					
4.	Audio- visual aids used					
5.	Clarity of presentation					
6.	Critical Analysis					
7.	Ability to respond to questions on the subject					
8.	Ability to defend the topic					
9.	Referencing					
10.	Implementation recent advancement on the topic					
Total Marks: 50						

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Seminar / mentor shall be determining the marks basis of the following:

S.No.	Parameter	Score
1.	Proficiency of knowledge required for each radiological imaging procedures	0-5
2.	The competency in skills expected to manage each radiological imaging procedures	0-5
3.	Responsibility, punctuality, work up of case, involvement in follow-up reports	0-5
4.	Capacity to work in a team (Behavior with colleagues, technologist and relationship with other healthcare workers)	0-5
5.	Initiative, participation in discussions, research aptitude	0-5

SCORING SCALE:

1. Poor
2. Below Average
3. Average
4. Good
5. Excellent

Note: A score of less than 2 in any of above items will represent unsatisfactory completion of internship.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

EVALUATION OF THE LOGBOOK

Sl. No.	Items of observation during presentation	I	II	III	IV	V	VI	Internship
1	Organization of the log book							
2	Adequacy of Content/ Information in the log Book							
3	Punctuality							
4	Relevance of Content/ Information in the log Book							
5	Shows professional conduct during the Teaching Learning session							
6	Timely submissions of Projects/Synopsis/Seminar effectively							
7	Work Relationship & Frequency of consulting Faculty							
8	Overall quality of department work							
	Total Score							
	Signature of the Co-ordinator							

SCORING:-

1. Poor
2. Below Average
3. Average
4. Good
5. Excellent

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Grading and Classification

Grading system

Letter grades and CGPA

The performance of a candidate shall be evaluated according to a Letter Grading System, based on the both CIE and ESE. The letter grades (O, S, A+, A, B, C, F and I) indicate the level of academic achievement assessed on a 10 point scale (0 to 10).

Marks Range (%)	Grade Point	Letter Grade	Descriptor	Classification	CGPA
90 & above	10	O	Outstanding	First class with distinction	7.00 and Above
80-90	9	S	Excellent		
70-79	8	A+	Very Good		
60-69	7	A	Good	First class	6.00-6.99
55-59	6	B+	Average	Second class	5.50-5.99
50-54	5	B	Pass	Pass class	5.00-5.49
Below 50	0	F	Fails	Fail	Less than 4.0
Absent	0	I	Absent		

For non- credit courses ‘Satisfactory’ (P) or ‘Unsatisfactory’ (F) shall be indicated instead of the letter grade and this will not be counted for the computation of SGPA/CGPA

- A candidate shall be considered to have completed a course successfully and earned the credits assigned, if he secures an acceptable letter grade in the range O-C. Letter grade ‘F’ in any course implies failure in that course and no credit is earned.
- A candidate having satisfactory attendance at classes and meeting the passing standard at CIE in a course, but remained absent from SEE shall be awarded ‘I’ grade in that course.

Grade Point Averages:

The overall performance of a candidate will be indicated by Grade Point Average (GPA). For each course grade points will be awarded as per a letter grading system.

Semester Grade Point Average (SGPA) is computed as follows:

$\sum [(course\ credit) \times (Grade\ point)]$ for all courses with Letter grades, including F

SGPA = -----

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Σ [(course credits)] for all courses with Letter grades, including F Cumulative Grade Point Average (CGPA) is computed as follows:

Σ [(course credit) X (Grade point)] for all courses for all semesters with, Letter grades excluding F
CGPA = -----

Σ [(course credits)] for all courses for all semesters with Letter grades, excluding F

Conversion of Grades into Percentage

Formula for conversion of GPA into percentage: CGPA earned X10 = Percentage of marks scored
Illustration: (CGPA Earned 8.18 X 10) = 81.80 %

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Award of Class:

The candidate, who has passed all the courses prescribed, shall be declared to have passed the program. Class will be awarded only to those who pass the entire examination in the first attempt and on the basis of the aggregate of marks scored in individual semester.

- A candidate who secures $GPA \geq 7.00$ and above in first attempt shall be declared to have passed in 'First Class with Distinction'.
- A candidate who secures $GPA \geq 6.00$ or more but less than 7.00 in the first attempt shall be declared to have passed in 'First Class'.
- A candidate who secures $GPA \geq 5.00$ or more but less than 6.00 in the first attempt shall be declared to have passed in 'Second Class'.
- A candidate who secures $GPA \geq 4.00$ or more but less than 5.00 in the first attempt shall be declared to have passed in 'Pass Class'.
- Candidates who pass the examinations in more than one attempt shall be declared as passed in 'Pass' class irrespective of the percentage of marks secured.
- An attempt means the appearance of a candidate for one or more courses either in part or full in a particular examination. If a candidate submits application for appearing for the examination but does not appear for any of the courses either in full or part in the university examination, he can appear for supplementary examination provided other conditions such as attendance requirement, internal assessment marks, etc. are fulfilled and his appearing in the supplementary examination shall be considered as the first attempt.

Carry over benefit:

A candidate shall appear for all the subjects of that particular semester in the University examinations but failed in that semester can avail this benefit, provided:

- A candidate who fails in not more than 2 subjects in I semester is allowed to move to II semester. The candidate with back log subjects shall take both I semester backlog subjects as well as II semester subjects. The candidate with a backlog of not more than 2 subjects in II semester is allowed to go to the III semester till he/she clears all I semester subjects.
- The candidate with a backlog of not more than 2 subjects in III semester is allowed to go to the IV semester till he/she clears all II semester subjects.
- The candidate with a backlog of not more than 2 subjects in IV semester is allowed to go to the V semester till he/she clears all III semester subjects.
- The candidate with a backlog of not more than 2 subjects in V semester is allowed to go to the VI semester till he/she clears all IV semester subjects.
- Results of candidates will be declared at the end of VI semester only when the all backlog subjects are cleared by the candidates.

Maximum attempt: No more than three attempts shall be allowed for the candidate to pass the any subjects. If he/she fails to clear the any subjects within three attempts will be considered as withdrawal of the course.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Re-totaling:

Re-totaling of marks is permitted only for theory papers. The University/board, on application within the stipulated time and remittance of a prescribed fee, shall permit a re-totaling of marks for the course/s applied. The marks obtained after re-totaling shall be the final marks awarded. There is no facility provided for repeat paper valuation of any subjects.

Supplementary Examinations:

Supplementary examination shall be conducted by the university for the benefit of unsuccessful candidates. Lower semester examinations shall be conducted by the University along with current semester examinations for the benefit of unsuccessful candidates.

- A Candidate detained for lack of attendance will be barred from appearing in any one or all course/s for the supplementary examination.
- A candidate permitted to appear for the supplementary examination can improve his internal assessment marks before he takes the supplementary examination by subjecting himself to internal assessment.

Conduct and discipline:

Candidates shall conduct themselves within and outside the premises of the Institute in a manner befitting the student of an educational institution.

As per the order of Honorable Supreme Court of India, ragging in any form is considered as a criminal offence and is banned. Any form of ragging will be severely dealt with.

The following act of omission and/or commission shall constitute gross violation of the code of conduct and are liable to invoke disciplinary measures:

Ragging as defined and described by the Supreme court/Government Lack of courtesy and decorum; indecent behavior anywhere within or outside the campus. Willful damage or stealthy removal of any property/belongings of the Institute/Hostel or of fellow candidates/citizens. Possession, consumption or distribution of alcoholic drinks or any kind of hallucinogenic drugs. Mutilation or unauthorized possession of library books. Noisy or unseemly behavior, disturbing studies of fellow candidates. Hacking in computer systems (such as entering into other person's domain without prior permission, manipulation and/or damage to the computer hardware and software or any other cyber-crimes.) Plagiarism of any nature. Any other act of gross indiscipline as decided by the Board of Management from time to time.

Commensurate with the gravity of offense, the punishment may be: reprimand, fine, expulsion from the hostel, debarment from an examination, disallowing the use of certain facilities of the Institution, rustication for a specific period or even outright expulsion from the Institution, or even handing over the case to appropriate law enforcement authorities or the judiciary, as required by the circumstances.

For any offence committed in (i) a hostel (ii) a department or in a classroom and (iii) elsewhere, the Chief Warden, the Head of the Department and the Head of the Institution, respectively, shall have the authority to reprimand or impose fine.

All cases involving punishment other than reprimand shall be reported to the Vice-Chancellor.

Cases of adoption of unfair means and/or any malpractice in an examination shall be reported to the Controller of Examinations for taking appropriate action.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Graduation requirements:

1. Candidate shall be declared eligible for the award of the degree if he or she has:
2. Fulfilled all degree requirements.
3. No dues to the University, Institution, departments, hostels, library etc.
4. No disciplinary action pending against him.
5. The award of degree must be recommended by the Board of Management.

Convocation:

Degrees will be awarded in person to all eligible students who have graduated during preceding academic year at the annual convocation.

First Semester

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Human Anatomy

Subject Code: BMRIT - 101 RATIONALES

Anatomy is a key component of all education programme for MRITs and should have a strong focus on organ position, orientation and relationships. The topics provide the student with an understanding of the structure and relationships of the systems and organs of the body which is essential in patient preparation and positioning.

The radiographic anatomy component will enable MRITs to evaluate images prior to reporting by the radiologist.

COURSE OUTCOMES

- 1) Describe the general anatomy of human body
- 2) Explain normal disposition of various structures and organs in the body and its clinical correlation
- 3) Describe the microscopic structure of various tissues
- 4) Determine the topography of various structures on the surface of the body
- 5) Identify and locate structures of the body
- 6) Identify organs and tissues under microscope

THEORY COMPONENTS

The following topics/sub topics should be taught and assessed in order to attain the identified competency.

Unit	Topic and contents	Hours	Marks
I	Introduction: Human Body as a Whole Definition of anatomy and its subdivisions, Terms of location, positions and planes, Cell and its organelles, Epithelium – definition, classification, describe with examples, functions, Glands – classification, describe serous and mucous glands with examples, Basic tissues – classification with examples	08	14
II	Locomotion and Support Cartilage – types, examples and histology Bone – classification, examples and histology. Parts of long bone, names of all bones, vertebral column and intervertebral disc. Fontanel's of fetal skull. Joints – classification of joints with examples, typical synovial joint (in detail). Muscular system – classification of muscular tissue and histology Important muscles of the body- Sternocleidomastoid, Trapezius, Muscles of tongue, Deltoid, Biceps brachia, Intercostal muscles, Thoracic diaphragm, Rectus abdominal, External oblique, Internal oblique, Transverses abdominis, Pelvic diaphragm, Gluteus Maximus, Gluteus medius, Gluteus Minimus, Quadriceps femoris, Soleus.	08	14

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

<p align="center">III</p>	<p>Cardiovascular System</p> <p>Heart – size, location, chambers, exterior and interior, Blood supply of heart, Pericardium, Systemic and pulmonary circulation, Branches of aorta - common carotid artery, subclavian artery, Axillary artery, brachial artery, radial artery, superficial palmar arch, femoral artery, popliteal artery, dorsalis pedis artery., Peripheral pulse, Inferior venacava, portal vein, portosystemic anastomosis, Great saphenous vein, median cubital vein, Dural venous sinuses, Lymphatic system – cisterna chyli and thoracic duct, Lymphatic tissues and its histology, Regional lymph nodes – cervical, axillary and inguinal lymph nodes.</p> <p>Respiratory System</p> <p>Parts of RS – nose, nasal cavity, paranasal air sinuses, larynx, trachea, lungs, pleura, bronchopulmonary segments, Histology of trachea and lungs.</p>	<p align="center">08</p>	<p align="center">20</p>
<p align="center">IV</p>	<p>Gastro-Intestinal System Theory</p> <p>Parts of GIT- oral cavity (lip, cheek, tongue, salivary glands, palate, dentition) pharynx (Wanderer’s ring) esophagus, stomach, small and large intestine and appendix, Liver, gall bladder, pancreas and spleen, Histology of esophagus, stomach, small and large intestine, liver, gall bladder and pancreas.</p> <p>Peritoneum</p> <p>Description of reflection folds and pouches in brief.</p>	<p align="center">08</p>	<p align="center">14</p>
<p align="center">V</p>	<p>Urinary System</p> <p>Kidney, ureter, urinary bladder, male and female urethra, Histology of kidney, ureter and urinary bladder.</p> <p>Reproductive System</p> <p>Parts of male reproductive system- testis, vas deferens, epididymis, prostate, Parts of female reproductive system- uterus, fallopian tubes, ovary, mammary gland, Histology of testis, vas deferens, epididymis, prostate, uterus, fallopian tube and ovary.</p> <p>Endocrine Glands</p> <p>Names of all endocrine glands, describe in detail on pituitary gland, thyroid gland and parathyroid gland, suprarenal gland, Histology of pituitary, thyroid, parathyroid, suprarenal gland.</p>	<p align="center">08</p>	<p align="center">20</p>

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

VI	Nervous System Neuron, Classification of nervous system, Cerebrum, cerebellum, brain stem, spinal cord & spinal nerve, Meninges, ventricles and cerebrospinal fluid, Blood supply of the brain, Cranial nerves (in brief), Nerve plexus (Brachial & lumbar)	08	14
	Sensory Organs Skin and its appendages, Eye – parts of eye ball and lacrimal apparatus, Extra-ocular muscles, Histology of cornea and retina, Ear – parts of ear- external, middle and inner ear and contents Embryology , Spermatogenesis and oogenesis, Ovulation, fertilization, Placenta		
Total		48	96

SUGGESTED PRACTICAL / DEMONSTRATION

Sr. No	Topic & Content	Hours
I	Demonstration of Histology of types of epithelium, Histology of serous, mucous and mixed salivary gland, Surface marking of the body region wise.	1
II	Demonstration of Histology of hyaline, elastic and fibrocartilage, Demonstration of all bones showing parts, radiographs of normal bones and joints, Histology of compact bone (TS and LS), Demonstration of all muscles of the body, Histology of skeletal, smooth and cardiac muscle.	1
III	Demonstration of heart, pericardium and vessels of the body, Histology of large artery, medium sized artery and large vein, Histology of lymph node, spleen, tonsil and thymus, Normal chest radiograph showing heart shadows, Normal angiograms. Demonstration of parts of respiratory system, Normal radiographs of chest, Histology of lung and trachea.	1
IV	Demonstration of parts of GIT, liver, gall bladder, pancreas and spleen, Histology of tongue, salivary glands, esophagus, stomach, small and large intestine, liver, gall bladder, pancreas and spleen, Radiographs of abdomen plain and contrast. Demonstrations of reflections, folds and pouches.	1
	Demonstration of parts of urinary system, Histology of kidney, ureter, urinary bladder, Radiographs of abdomen – IVP, retrograde cystogram.	1

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

V	Demonstration of section of male and female pelvis with organs in situ, Histology of testis, vas deferens, epididymis, prostate, uterus, fallopian tube and ovary, Radiographs of pelvis – Hysterosalpingogram. Demonstration of the glands, Histology of pituitary, thyroid, parathyroid, suprarenal glands.	
VI	Demonstration of Histology of peripheral nerve and optic nerve, Demonstration of major nerves in the body, Demonstration of cranial cavity and parts of brain, Histology of cerebrum, cerebellum, spinal cord Demonstration of Histology of thin and thick skin, Demonstration of histology of cornea and retina.	1
	Total	6
Demonstration will be part of theory/tutorial classes. There is in separate credit for the practical's/demonstrations.		

QUESTION PAPER BLUEPRINT

Unit		Marks (± 5%)
1.	Introduction Human Body as a Whole	14
2.	Locomotion and Support	14
3.	Cardiovascular System, Respiratory System	20
4.	Gastro-Intestinal System, Peritoneum	14
5.	Urinary System, Reproductive System, Endocrine Glands	20
6.	Nervous System, Sensory Organs, Embryology	14
	Total Marks (including optional questions)	96

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

SUGGESTED LEARNING RESOURCES

S.No.	Title of Book	Author	Publication
1	Human Anatomy, Vol.1,2 &3, 5th edition, 2010,	B.D. Chaurasia	CBS publishers & distributors Pvt. Ltd.
2	Physiology & Anatomy with Practical Considerations	Ester. M. Grishcimer	J.P. Lippincott. Philadelphia
3	Manipal Manual of Anatomy, 2nd edition, 2012	Sampath Madhyastha	CBS publishers & distributors Pvt. Ltd
4	Text Book of General Anatomy, 2nd edition, 2013	Shobha Rawlani and Shivlal Rawlani	Jaypee brothers
5	Langman's Medical Embryology, 11th edition, 2009	T.W Sadler	Wolters Kluwer

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: PHYSIOLOGY Subject Code: BMRIT - 102 RATIONALES

Physiology provides the students with knowledge of the function of systems and organs and their relationships and underpins the understanding of how various imaging modalities are to be selected depending upon the clinical history.

COURSE OUTCOMES

- 1) Explain the normal functioning of organs and systems.
- 2) Understand the interrelationships and interactions among various organs and systems for maintaining homeostasis.
- 3) Assess the relative contribution of each organ systems toward the maintenance of constant internal environment
- 4) Differentiate between normal and abnormal functioning of organs and systems,
- 5) Understand physiological basis of pathogenesis and treatment of diseases and disorders.
- 6) Apply the physiological basis in the field of allied health care

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency.

Unit	Topic and contents	Hours	Marks
I	<p>General physiology</p> <p>Introduction to Physiology, Concept of Homeostasis, cell – Morphology – Functions of organelles and Cell membrane, Transport mechanisms, Body fluid compartments.</p> <p>Muscle nerve physiology</p> <p>Neurons: Morphology, Action Potential, Neuroglia: Types & functions, Muscles: Types, structure of sarcomere. Neuromuscular junction, sliding filament mechanism of contraction.</p> <p>Blood</p> <p>Composition, properties, functions. Plasma proteins: Concentrations and functions, RBC: Morphology, functions, count, physiological variations and life span Erythropoiesis – stages, essential factors, regulation of Erythropoiesis, Hemoglobin: Functions, concentration, physiological variations. Fate of Hemoglobin – Jaundice, types, Color index, MCH, MCV, MCHC, PCV – normal values, WBC: Morphology, functions of all types including T & B lymphocytes, total and differential counts, physiological variations, Platelets: Morphology, count, functions, thrombocytopenia & bleeding time, Blood groups: Basis of blood grouping. Landsteiner’s laws, ABO system, determination of blood groups, blood transfusion, complications of incompatible blood transfusion, Rh group, erythroblastosis foetalis, prevention and treatment, Blood bank.</p> <p>Haemostasis: Mechanisms. Clotting mechanism: factors, intrinsic and extrinsic pathways.</p> <p>Disorders of clotting – hemophilia, vitamin K deficiency. Anticoagulants – mechanism of action and their uses, Anemia: Classification – Morphological and Etiological, Blood volume: normal values.</p>	10	15
II	<p>Cardiovascular system</p> <p>Organization of cardiovascular system, greater and lesser circulation, Physiological anatomy of the heart, nerve supply, Junctional tissues of heart (pacemaker), Cardiac cycle: Mechanical events, Heart sounds, causes, characteristics and significance, Normal ECG, clinical significance of ECG, Heart rate – Physiological variations, Cardiac output: Definitions, normal values, physiological variations, Arterial blood pressure: Definitions, normal values, physiological variations, factors maintaining blood pressure. Role of baroreceptors in regulation of blood pressure.</p>	10	10

Handwritten signatures and marks in blue ink are present at the bottom of the page, including a large signature on the right and several smaller ones on the left.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

<p align="center">III</p>	<p>Respiratory system</p> <p>Respiratory and Non-respiratory function of respiratory system. Physiological anatomy of respiratory system Functions of respiratory tract. Respiratory membrane. Respiratory muscles. Surfactant: functions, respiratory distress syndrome.</p> <p>Definitions of terms used in respiratory physiology: Eupnea, Hyperpnoea, Tachypnea, Apnea, Dyspnea.</p> <p>Mechanics of breathing – intrapulmonary and Intrapleural pressure changes during a respiratory cycle.</p> <p>Spirometry – Lung volumes and capacities. Vital capacity.</p> <p>Oxygen transport: Role of hemoglobin, factors affecting, oxygen carrying capacity. Carbon dioxide transport: forms, chloride shift (Hamburgers phenomenon).</p> <p>Respiratory centers. Role of chemo receptors in regulation of respiration. Pulmonary ventilation and alveolar ventilation.</p> <p>Partial pressure of gases, Calculation of partial pressure of gasses in mixture. S.No.	Title of Book	Author	Publication
1	Foundation of Anatomy and Physiology	Ross Wilson	Churchill Livingstone.
2	Physiology & Anatomy with Practical Considerations	Ester. M. Grisheimer	J.P. Lippincott. Philadelphia
3	Text Book of Physiology	A. P. Krishna	Suman Publication
4	Text Book of Physiology	A.K. Jain	Avichal Publishing Company;

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Basics of Radiation Physics

Subject Code: BMRIT - 103

RATIONALES

Radiation physics is one of the primary pillars underlying the practice of radiology technology and understanding the principles of radiation physics helps BMRIT become better technologist.

COURSE OUTCOMES

- 1) Describe general physics related to imaging
- 2) Differentiate between within general radiation
- 3) Identify construction of radiology equipment's
- 4) Interpret quality of control of radiology equipment's
- 5) Differentiate between x-ray equipment's and other radiology related equipment's
- 6) Describe production of x-rays

THEORY COMPONENTS

Unit	Topic and contents	Hours
I	Basic concepts: Units and measurements-Force, work, power and energy-Temperature and heat-SI units of above parameters. Atomic structure-atom model-Nucleus-electronic configuration-periodic table-Isotopes-Ionization- excitation-Binding energy-electron volt-Electromagnetic radiation-Quantum nature of radiation-mass energy equivalence-Fluorescence-electromagnetic spectrum.	5
II	Electricity and magnetism: Electric charges, Coulomb's law-Unit of charge-Electric potential, unit of potential-Electric induction, capacitance and Capacitors, series and parallel connection-electric current, unit, resistance, ohm's law, electric power, Joule's law. Varying currents-Growth and decay of current in LR circuit time constant, charge and discharge of a Capacitor through a resistance and inductance. Oscillations in an LC circuit. Alternating currents: Peak and RMS values and current and voltage, circuit containing LR, CR and LCR-Power factor, series and parallel LCR circuits, DC circuit, Ohm's law, resistivity, series and parallel combination, EMF, Kirchhoff's law, heating effect of current. Electromagnetic waves: Introduction, Maxwell's equation, electromagnetic waves, energy density and intensity, momentum, electromagnetic spectrum and radiation in Atmosphere.	6

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

III	<p>Electronics</p> <p>Semiconductors; Conduction in crystals, Energy bands. Intrinsic and Extrinsic semiconductors n-type and p-type semiconductors, majority and minority carriers. Semiconductor diodes: p-n junction-properties forward and reverse bias, characteristics of p-n junction Rectifiers-Half-wave and full wave, ripple factor, Efficiency of HW and FW rectifiers. Filter circuits; Zener diode, regulated power supply.</p> <p>Transistors-Symbols, Transistor connections and characteristics, Transistor as an amplifier, load line analysis, operating point, types of amplifiers-voltage and power amplifiers. Feedback-negative feedback in amplifiers.</p>	5
IV	<p>Discovery of x-rays-X-ray production and properties: Bremsstrahlung radiations-Characteristics X-Rays, factors affecting X-ray emission spectra, X-ray quality and quantity, HVL measurements, heel effect, soft and hard X-Rays, added and inherent filtration, reflection and transmission targets.</p>	5
V	<p>Heat</p> <p>Definition of heat, temperature, Heat capacity, specific heat capacity, Heat transfer-conduction, convection, radiation, thermal conductivity, equation for thermal conductivity (k), the value of k of various material of interest in radiology, thermal expansion, Newton's law of cooling, Heat radiation, perfect black body, Stefan law, application in Diagnostic Radiology (Heat dissipation in both stationary and rotating X-ray tubes).</p>	4
VI	<p>Interaction of ionizing radiation with matter-Types of interactions of X-and gamma radiation, Photoelectric & Compton, Pair production, annihilation radiation. Interaction of X and gamma rays: Transmission through matter, law of exponential attenuation, half value layer, and linear attenuation coefficient-coherent scattering-photonuclear disintegration-Particle interactions. Interactions of X rays and Gamma rays in the body; fat-soft tissue-bone-contrast media-total attenuation coefficient-relative clinical importance.</p>	5
VII	<p>Exponential attenuation (linear/mass attenuation coefficients), Half Value Thickness (HVT), Tenth Value Thickness (TVT), dependence on energy and atomic number.</p> <p>Radiation intensity and exposure, photon flux and energy flux density. LET, range of energy relationship for alpha, beta particles with X-Rays.</p> <p>Physical quantity, its unit and measurement: Fundamental and derived quantity, SI unit, various physical/radiation quantity used in Diagnostic Radiology and its unit (for example, KVp, mA, mAS, Heat unit.</p>	6
Total		36

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Introduction to Healthcare

Subject Code: BMRIT - 104

RATIONALES

The course provides the students a basic insight into the main features of Indian health care delivery System and how it compares with the other systems of the world.

COURSE OUTCOMES:

- 1) Student will have thorough **knowledge** of healthcare delivery system in India that will help to analyses the scenario.
- 2) Student will have **understood** about government policies and they implement in their working place.
- 3) Students will have ability to **differentiate** amongst the AYUSH System and how they work.
- 4) Students will have use **modern tools** for **explain** demographic situations of Health sciences in India.
- 5) Student will **analyze** the healthcare system with respect of Epidemiology.
- 6) Graduates will able to **generate** daily log book for patients for better treatment and diagnosis.

Topic and contents	Hours
<p>Introduction to Health: Definition of Health, Determinants of Health, Health indicators of India, Health team concept National Health Policy National Health Programs (Brief objectives and scope) Family welfare programs in India Introduction to Nursing: Nursing and Nursing principles, Interpersonal relationships, Bandaging basic turns, Bandaging extremities, Triangular bandages and their applications Nursing position, bed making, prone, lateral, dorsal, dorsal re-cumbent, Fowler's position, comfort measures, Aids, rest and sleep Lifting and transporting patients, Transferring patients to wheel chair, transferring from bed to stretcher Bedside Management: Proper usage of bed pan, Observation of stools, urine, sputum. Understand the use and care of catheters. Enema procedures Method of giving nourishment: Feeding, tube feeding, drips, transfusion</p>	18

Monitoring and recording of vitals Simple aseptic techniques, sterilization and disinfection Observation of surgical dressings Concepts of First Aid	
---	--

SUGGESTED LEARNING RESOURCES

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Medical Terminologies and Record Keeping

Subject Code: BMRIT - 105

RATIONALE

This course introduces the elements of medical terminology. Emphasis is placed on building familiarity with medical words through knowledge of roots, prefixes, and suffixes.

COURSE OUTCOMES:

- 1) Student will have **knowledge** about the suffix, prefix and roots and terminology used in healthcare systems.
- 2) Students will be able to **summarize** suffix, prefix and basic term used for reference.
- 3) Students will be able to **classify** medical term for their use in report writing and during discussion with doctors.
- 4) Students will be able to **interpret and generate** medical orders/reports.
- 5) Students will be able to **select** the appropriate suffix and prefix during diagnosis report writing.
- 6) Students will have ability to **generate** data for entry and management on electronic health record system.

THEORY COMPONENTS

Topic and contents	Hours
<p>Topics include: origin, word building, abbreviations and symbols, terminology related to the human anatomy, reading medical orders and reports, and terminology specific to the student's field of study. Spelling is critical and will be counted when grading tests. Topics to be covered under the subject are as follows:</p> <p>Derivation of medical terms. Define word roots, prefixes, and suffixes. Conventions for combined morphemes and the formation of plurals. Basic medical terms. Form medical terms utilizing roots, suffixes, prefixes, and combining roots. Interpret basic medical abbreviations/symbols. Utilize diagnostic, surgical, and procedural terms and abbreviations related to the integumentary system, musculoskeletal system, respiratory system, cardiovascular system, nervous system, and endocrine system. Interpret medical orders/reports. Data entry and management on electronic health record system.</p>	<p align="center">18</p>

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Basic Computers and Information Science

Subject Code: BMRIT - 106

RATIONALE

The students will be able to appreciate the role of computer technology. The course has focus on computer organization, computer operating system and software, and MS windows, Word processing, Excel data worksheet and PowerPoint presentation.

COURSE OUTCOMES:

- 1) Students will able to **identify** hardware and software of computer and laptop.
- 2) Students will able to **understand** mechanism of working principle of computers.
- 3) Students will use **modern software** to get better results during diagnosis of disease.
- 4) Students will able to **analyze** results in MS excel sheets.
- 5) Student will able to **evaluate** various operating systems for better work.
- 6) Students will able to **design & create** various types of MS office file for their work.

THEORY COMPONENTS

Topic and contents	Hours
<p>Topics to be covered under the subject are as follows:</p> <ul style="list-style-type: none">• Introduction to computer: Introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.• Input output devices: Input devices(keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices(monitors, pointers, plotters, screen image projector, voice response systems).• Processor and memory: The Central Processing Unit (CPU), main memory.• Storage Devices: Sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.• Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.).• Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.• Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.• Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.• Introduction of Operating System: introduction, operating system concepts, types of operating system.	18

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

- Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.
- Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet.
- Application of Computers in clinical settings.

Practical on fundamentals of computers -

- Learning to use MS office: MS word, MS PowerPoint, MS Excel.
- To install different software.
- Data entry efficiency

SUGGESTED LEARNING RESOURCES

S.No.	Title of Book	Author	Publication
1	Basic of Computer and Information Technology	Ashok Arora	Vikas
2	Computer and Information Science	Roger Lee (editor)	Springer
3	Computer and Information Science	Tadeusz Czachórski , Erol Gelenbe, Krzysztof Grochla, Ricardo Lent (Editor)	Springer

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Medical law and ethics

Subject Code: BMRIT – 107

RATIONALES

Legal and ethical considerations are firmly believed to be an integral part of medical practice in planning patient care. Advances in medical sciences, growing sophistication of the modern society's legal framework, increasing awareness of human rights and changing moral principles of the community at large, now result in frequent occurrences of healthcare professionals being caught in dilemmas over aspects arising from daily practice.

Medical ethics has developed into a well based discipline which acts as a "bridge" between theoretical bioethics and the bedside. The goal is "to improve the quality of patient care by identifying, analyzing, and attempting to resolve the ethical problems that arise in practice". Doctors are bound by, not just moral obligations, but also by laws and official regulations that form the legal framework to regulate medical practice. Hence, it is now a universal consensus that legal and ethical considerations are inherent and inseparable parts of good medical practice across the whole spectrum.

COURSE OUTCOMES:

- 1) On completion of the course the students have **knowledge** about the medical law and ethics.
- 2) Able to **classify** the legal and illegal issues faced in hospital and health care centers.
- 3) The students should **understand** the code and conduct of ethics for medical professions.
- 4) They will be able to **integrate** patient more lawfully in clinical and hospital setting and maintain their records.
- 5) Students will able to **evaluate** legal circumstances arises in health care facility.
- 6) Students will able to **design** efficient legal and ethical aspects of subject matter.

THEORY COMPONENTS

Topic and contents	Hours
<p>The important and relevant topics that need to focus on are as follows:</p> <ul style="list-style-type: none">• Medical ethics - Definition - Goal - Scope• Introduction to Code of conduct• Basic principles of medical ethics – Confidentiality• Malpractice and negligence - Rational and irrational drug therapy• Autonomy and informed consent - Right of patients• Care of the terminally ill- Euthanasia• Organ transplantation• Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized• Disclosure - retention of medical records - other various aspects.• Professional Indemnity insurance policy	18

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

- Development of standardized protocol to avoid near miss or sentinel events obtaining an informed consent.
- Medical ethics - Definition - Goal - Scope
- Introduction to Code of conduct
- Basic principles of medical ethics – Confidentiality
- Malpractice and negligence - Rational and irrational drug therapy
- Autonomy and informed consent - Right of patients
- Care of the terminally ill- Euthanasia
- Organ transplantation
- Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.
- Professional Indemnity insurance policy
- Development of standardized protocol to avoid near miss or sentinel events
- Obtaining an informed consent.

SUGGESTED LEARNING RESOURCES

S.No.	Title of Book	Author	Publication
1	Medical Law and Ethics	Bonnie F. Fremgen	Pearson
2	Medical Law and Ethics	Jonathan Herring	OUP UK
3	Medical Law and Ethics	Purosottam Behera	Mittal Publications
4	Reflections on Medical Law and Ethics in India	Bismi Gopalakrishnan, Mercy Khaute, B. Sandeepa Bhat	Eastern Law House

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Professionalism and Values

Subject Code: BMRIT – 108

RATIONALES

The module on professionalism will deliver the concept of what it means to be a professional and how a Specialized profession is different from a usual vocation.

It also explains how relevant is professionalism in terms of healthcare system and how it affects the overall patient environment.

COURSE OUTCOMES:

- 1) Students will remember to professional codes of conduct and ethical standards in all aspects.
- 2) Students will able to analyze ethical issues and dilemmas in health practice, employing ethical reasoning to resolve conflicts and make sound decisions.
- 3) Graduates will able to understand effective communication skills to interact with patients, colleagues, and other healthcare professionals.
- 4) Students will able to apply principles of patient autonomy, confidentiality, and informed consent in clinical settings, ensuring patient rights and dignity are upheld at all times.
- 5) Graduates will able to evaluate the importance of lifelong learning and professional development, engaging in healthcare system.
- 6) Students will able to create a healthy environment for patient and other healthcare professionals.

THEORY COMPONENTS

Topic and contents	Hours
1. Professional values- Integrity, Objectivity, Professional competence and due care, Confidentiality 2. Personal values- ethical or moral values 3. Attitude and behavior- professional behavior, treating people equally 4. Code of conduct, professional accountability and responsibility, misconduct 5. Differences between professions and importance of team efforts 6. Cultural issues in the healthcare environment	18

SUGGESTED LEARNING RESOURCES

S.No.	Title of Book	Author	Publication
1	Textbook of Medical Ethics	Erich H Loewy	Springer
2	Professionalism, Professional Values and Ethics in Nursing	Suresh K Sharma, Asha P Shetty	Jaypee Brothers Medical Publishers
3	Essentials of Professionalism, Professional Values & Ethics for BSc Nursing Students	Varinder Kaur	CBS Publishers and Distributors Pvt. Ltd

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Principals of Management

Subject Code: BMRIT – 109

RATIONALES

The course is intended to provide knowledge about the basic principles of Management.

COURSE OUTCOMES:

- 1) Students will learn about different types of management involved in healthcare sector.
- 2) Graduates will be able to understand time management and working cost efficiently.
- 3) Students will be able to apply management concepts to analyze and solve real-world organizational problems.
- 4) Graduates will be able to analyze effectively in managerial roles through written reports and presentations.
- 5) Students will be able to evaluate ethical implications of managerial decisions and actions.
- 6) Students will be able to create collaborate efficiently in team settings to accomplish common goals.

THEORY COMPONENTS

Topic and contents	Hours
<ol style="list-style-type: none">1. Introduction to management2. Strategic Management3. Foundations of Planning4. Planning Tools and Techniques5. Decision Making, conflict and stress management6. Managing Change and Innovation7. Understanding Groups and Teams8. Leadership9. Time Management10. Cost and efficiency	18

SUGGESTED LEARNING RESOURCES

1	Essentials of Professionalism, Professional Values & Ethics for BSc Nursing Students	Varinder Kaur	CBS Publishers and Distributors Pvt. Ltd
2	Professionalism Professional Values and Ethics in Nursing	Suresh K Sharma	Jaypee Brothers
3	Professionalism, Professional Values & Ethics	Shama Lohumi	CBS publishers and Distributors PVT Ltd

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: English and Communication skills

Subject Code: BMRIT - 110

RATIONALE

Patients need to feel safe enough to communicate honestly and openly with their care providers to receive effective treatments.

Providers need to convey treatment plans and health education clearly, accessibly, and empathetically so that patients can receive optimal care.

COURSE OUTCOMES:

- 1) Students will have good **knowledge** about English grammar and drafting letters.
- 2) Students will have able to **understand** how to proper arrange of words in sentences.
- 3) Student will able to **respond frequently** asked questions develop leadership skill that help in laboratory managements.
- 4) Students will able to **explain** answers and write formal or informal letter.
- 5) Students will able to select appropriate word or sentences during answer writing and letter drafting.
- 6) Students will able to **design and assemble** official application and letters.

THEORY COMPONENTS

Topic and contents	Hours
<p>Language-Basic</p> <p>Content: Review of grammar, Remedial study of grammar, building vocabulary Introduction Parts of speech Exercise on use of grammar Tense, Number, Gender</p> <p>Assessment methods: Objective type, Fill in the blanks.</p> <p>Content: Read and comprehend prescribed course books Reading, Summarizing, Comprehension</p> <p>Assessment methods: Fill in the blanks and one-mark questions</p> <p>Content: Various Forms of Composition Letter writing Note taking Precise writing Diary Writing Reports on health problem etc. Official correspondence: Outgoing correspondence, replying incoming correspondence, writing circulars, notices, charge memos, note taking, writing summaries, observation reports. Teaching learning activities: Exercise on writing: Letter writing, resume/CV Essay writing.</p> <p>Assessment methods: Applications, short reports to be written.</p>	18

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Content: English- Spoken mode, Debates, Telephonic conversion, formal & informal conversation: Agreeing emphasizing, interrupting, politely, opinions, interviews, visual presentation.

Teaching learning activities: Participating in seminar, Telephonic conversion, conversation in different situations, practice in public speaking

Assessment methods: Assessment of the skills based on the checklist.

Content: Listening to comprehension media, audio, video, speeches, definition of listening, types of listening, purposes of listening, obstacles for listening, contexts of listening, to be a good listener, listening to a lecture etc.

Teaching learning activities: Listening to audio, video tapes and identify the key points.

Assessment methods: Practical test of listening and filling out the blanks, essay type.

SUGGESTED LEARNING RESOURCE

S.No.	Title of Book	Author	Publication
1	Communicative Nursing Students English for General	Tom Koorkkakala	K.J. Publications
2	How to write and speak Better, Reader's	John Ellison Kahn	Reader's Digest Association
3	Communication Development and Soft skill	Ashwini Deshpande	Career Publications

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

BMRIT Radiology Clinical Education – part I (studentship)

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel.

Students apply knowledge from previous clinical learning experience under the supervision of a senior technologist. Students are tested on intermediate clinical radio diagnosis skills.

Studentship or observer ship must include:

- A minimum of 14 hours per week is considered as studentship in every semesters.
- Provide simulation and skill labs for practicing skills specific to the program in the initial years of observer ship/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Second Semester

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Basics of Microbiology Subject Code: BMRIT - 201 RATIONALES

Basics of Microbiology helps students to gain information about structure, metabolism reproduction, function and diseases caused by bacteria, viruses, bacterial viruses, animal viruses, archaic, mycoplasma and Phytoplasma.

It also makes students aware of the nature and other important aspects of the microorganisms.

COURSE OUTCOMES

- 1) Describe the structure, classification, morphology and growth of bacteria
- 2) Describe the methods sterilization and disinfection and its applications
- 3) Explain the concepts of immunity, hypersensitivity and immunization
- 4) Describe Nosocomial infections and methods for prevention of Hospital acquired infections
- 5) Describe the management of biomedical waste
- 6) List the common fungi and viruses and explain their importance

THEORY COMPONENTS

Unit	Topic and contents	Hours
I	Morphology of Bacteria: (Structure, size, shape, arrangement cell wall, flagella, spore, capsule, fimbria) Physiology of Bacteria: (Bacterial growth curve, Temp, O ₂ , Co ₂ , micro and macro nutrient growth requirements) Culture Media Culture Methods Antimicrobial sensitivity tests Sterilization and Disinfections: Definition, Dry heat Sterilization, Moist heat Sterilization, Chemical disinfectants, Gaseous disinfection, Test for disinfection / Sterilization control	9
II	Infection: Classification, Sources of infection, Modes of transmission Nosocomial infection including biomedical waste management: Definition, Classification, Significance, Prevention and control Biomedical waste management	8

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

III	Immunology: Immunity, Antigen, Antibody, Hypersensitivity	5
IV	General Properties of fungi. (General characters, classification, Morphology, Reproduction) General Properties of Viruses. (General character, classification based on Genome, Capsid, Envelope & replication and cultivation of virus).	7
V	Applied Microbiology: Pyrexia of unknown origin, Meningitis, Zoonotic infections, Hepatitis, HIV infection and AIDS, Food poisoning, Diarrhea, Urinary tract infections, Pulmonary Tuberculosis	7
Total		36

Subject: Basics of Biochemistry

Subject Code: BMRIT – 202

RATIONALE

Biochemistry is a key component of all education programmes for MRITs and should have a strong focus on laboratory investigation with radiological procedures.

The topics provide the student with an understanding of the blood investigation and relationships of the systems which are essential in patient preparation and procedures.

COURSE OUTCOMES

- 1) Understand the responsibility of health care personals and hazards faced in the clinical laboratory
- 2) Explain the different types, use, care and maintenance of laboratory apparatus and instruments.
- 3) Understand the fundamental chemistry and knowledge of different solutions
- 4) Understand what acids, bases, salts and indicators are and also know about acid base balance
- 5) Describe the sample collection procedure to analyses various biochemical parameters
- 6) Describe assimilation of nutrients and consequences of malnutrition

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

THEORY COMPONENTS

Unit	Topic and contents	Hours
I	<p>Nutrition</p> <p>Calorific value Nitrogen Balance Respiratory quotient BMR</p> <p>Nutritional importance of carbohydrate, lipids, proteins, vitamins and minerals</p> <p>Emphasis on parenteral nutrition</p>	9

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Conventional Radiography and Equipment

Subject Code: BMRIT -203

RATIONALES

Conventional Radiography and Equipment provide the students' knowledge about the x-ray equipment working and also about how x-rays are produced.

COURSE OUTCOMES

- 1) Describe the structure and working of x-ray tube, production of x-rays
- 2) Describe the types of x-ray tube and heat dissipation methods
- 3) Explain the x-ray generator circuits
- 4) Describe the different circuit types
- 5) Describe the meters and exposure timers
- 6) List the control of scattered radiation

THEORY COMPONENTS

Unit	Topic and contents	Hours
I	<p>X-ray tube: historical aspects, construction of X-ray tubes, requirements for X-ray production(Electron source, target and anode material), tube voltage, current, space charge, early X-ray tubes(Coolidge tubes, tube envelop and housing) cathode assembly, X-ray production efficiency, advances in X-ray tubes, anode angulation and rotating tubes-line focus principle-space charge effect, tube cooling-Modern X-ray tubes-stationary anode, rotating anode, grid controlled X-ray tubes, heel effect, off focus radiation, tube insert and housing-Tube rating-Quality and intensity of x-rays-factors influencing them.</p> <p>Production of x-rays: X-ray tube, gas filled x-ray tube, construction working and limitations; stationary anode x - ray tube; construction, working, methods of cooling the anode, rating chart and cooling chart;</p>	10

Handwritten signature in blue ink

Handwritten signature in blue ink

Handwritten signature in blue ink

Handwritten signature in blue ink

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

II	<p>Rotating anode x - ray tube: construction, working rating chart, speed of anode rotation, angle of anode inclination, dual focus and practical consideration in choice of focus, anode heel effect, grid controlled x - ray tube; effect of variation of anode voltage and filament temperature; continuous and characteristics spectrum of x - rays, inherent filter and added filter, their effect on quality of the spectrum.</p> <p>Grid controlled and high speed tubes, focal spot size, speed of anode rotation, target angle, inherent filtration, radiation leakage and scattered radiation).Interlocking and X-ray tube overload protection.</p> <p>Heat dissipation methods, tube rating, heat units, operating conditions and maintenance and Q.A procedures.</p>	10
III	<p>Filament current and voltage, X-ray circuits (primary circuit, auto transformer), types of exposure switch and timers, principle of automatic exposure control (AEC) and practical operation, filament circuit, high voltage circuits, half wave, full wave rectification, three phase circuits. Types of generators, 3 phase, 6 and 12 pulse circuits-high frequency generators-falling load generators, Capacitors discharge and grid control systems.</p> <p>X-ray generator circuits: Vacuum tube diodes-semi-conductor diodes-transistor-Rectification-half and full wave-self rectification-X-ray generator; filament circuit-kilo Voltage circuit-single phase generator-three phase generator-constant potential generator-Fuses, switches and interlocks-Exposure switching and timers-HT cables-earthing.</p>	10
IV	<p>High tension circuits: H.T. generator for x-ray machines, three phase rectifier circuits, three phase six rectifier circuit, three phase 12 rectifier circuit, high and medium frequency circuits; capacitance filter control and stabilizing equipment; mains voltage compensator, mains resistance compensator, compensation for frequency variation, control of tube voltage, kV compensator; high tension selector switch, filament circuit, control of tube current, space charge compensation.</p> <p>Interlocking circuits: Relays: description and working, use of relays in diagnostic machines for over load protection, circuit diagram; simplified circuit and block diagrams illustrating sequence of events from mains supply to controlled emission of x-rays.</p>	10
V	<p>Meters and exposure timers: Moving coil galvanometer: construction and working/conversion to millimeter, ammeter and voltmeter, meters commonly used in diagnostic x-ray machines, pre reading kV meter and millimeter, digital panel meters. Clockwork timers, synchronous motor timer, electronic timers, photo metric timers (fluorescent and photoelectric effect as applied in timers), ion chamber-based timers, integrated timer.</p>	10

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

VI	<p>Control of scattered radiation: Beam limiting devices: cones, diaphragms, light beam collimator, beam centering device, methods to verify beam centering and field alignment; Filters- inherent filters, added filters, heavy metal filters, grids; design and control of scattered radiation, grid ratio, grid cut-off, parallel grid, focused grid, crossed grid, grided cassettes, stationary and moving grid potter bucky diaphragms, various types of grid movements; single stroke movement, oscillatory movement and reciprocatory movement.</p>	8
VII	<p>Fluoroscopy: Fluorescence and phosphorescence - description, fluorescent materials used in fluoroscopic screens, construction of fluoroscopic screen and related accessories, tilting table, dark adaptation. Image intensifier - Construction and working, advantages over fluoroscopic device, principles and methods of visualising intensified image, basic principles of closed circuit television camera and picture tube. Vidicon camera, CCD. Automatic brightness control, automatic exposure control, chamber selection during fluoroscopy. Serial radiography: Manual cassette changer, rapid automatic film changer, basic principles of cine fluoroscopy and angiography use of grid controlled x-ray tube.</p>	8
VIII	<p>Care and Maintenance of X-ray equipment; General care; functional tests; testing the performance of exposure timers, assessing the MA settings, testing the available KV, measurement of focal spot of an x-ray tube, testing the light beam diaphragm, practical precautions pertaining to Brakes and locks, H.T. cables, meters and controls, tube stands and tracks as well as accessory equipment.</p>	6

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Clinical Radiography Positioning (Part I)

Subject Code: BMRIT - 204

RATIONALES

Clinical Radiography Positioning Part- 1 provides the students with knowledge of x-ray imaging, positioning and all the care that should be taken.

COURSE OUTCOMES

- 1) Understand the basic patient positioning during radiographic investigation.
- 2) Apply special positioning skills for different pathological and physical conditions.
- 3) Application of equipment while working in radiology departments.
- 4) Choose proper position during radiography.
- 5) Explain relative positions of x-ray tube and patient relevant exposure factors during radiography.
- 6) Explain the use of accessories.

THEORY COMPONENTS

Unit	Topic and contents	Hours
I	Principles of Radiography: Preparation of the Room, Apparatus and Instruments Positions of the Patient: Erect, Sitting, Supine, Prone, Lateral, Oblique, Decubitus Etc. Relative position of X-Ray tube and patient, relevant exposure factors. Use of accessories such as radiographic cones, grid and positioning aids. Anatomic and Physiological basis of the procedure, Association with theory with practical work. Radiographic appearances, both normal and common abnormal conditions where elementary knowledge of the pathology involved will ensure the application of the appropriate radiographic technique. Modifications in technique for various disabilities and types of subject. Radiation protection, use of gonad shield, practical methods of reducing radiation dose to the patient.	8
II	Upper limb: Routine projections for the whole hand, fingers, wrist joint, forearm, elbow joint and humerus. Supplementary projections for Scaphoid, Carpal tunnel, Ball Catchers projections, Head of the Radius, Supracondylar fracture and Olecranon process	10
III	Lower limb: Routine projections for the whole foot, toes, calcaneus, ankle joint, leg, knee-joint, patella and femurs. Supplementary projections for Talo-Calcaneal joint, Forced projections for torn ligaments, Flat Feet, Club Feet, Intercondylar projections for loose bodies in the knee, Axial projection for Patella.	10

Dr. Preeti Pandey

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

IV	<p>Shoulder Girdle and Thorax: Routine projections for the shoulder joint, Scapula, Acromio-Clavicular joint, Clavicle, Sternoclavicular joint, Sternum and Ribs. Supplementary projections for the axial projection of Clavicle, Bicipital groove, Coracoid process.</p>	10
V	<p>Vertebral Column: Routine projections for Atlanto -Occipital joint, cervical spine, Cervico- thoracic Junction, thoracic Spine, lumbar Spine, Lumbo Sacral Region, Sacrum and Coccyx. Supplementary projections for the intervertebral foramina, posterior arch of Atlas, Flexion and Extension of Cervical Spine, Scoliosis and Kyphosis, Sacro Iliac Joint.</p>	12
VI	<p>Skull: Routine projections for cranium and facial bones; Supplementary projections for trauma, Towne's method, Sellaturcica, Optic foramina, Jugular foramina, Temporal bones, Mastoids, Petrous bone, Zygomatic arches, Orbits, Maxillae, Nasal bones, Mandible, Temporomandibular joints. Nasal Sinuses: Techniques for Frontal, Maxillary, Ethmoidal and Sphenoid Sinuses, erect and horizontal projections for fluid levels.</p>	12
VII	<p>Pelvic girdle and hip region: Routine projections for the whole pelvis, Sacro-Ileac joints, hip joint and Neck of Femur. Supplementary projections for the greater and lesser trochanters of Femur. Frog leg projection, Ischium, Symphysis Pubis, Ilium, Acetabulum and Congenital Dislocation of Hip, Arthrodesis. Skeletal survey: Skeletal survey for metabolic bone disease, metastases, hormonal disorder, renal disorders.</p>	10

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

BMRIT Radiology Clinical Education – part II (studentship)

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel.

Students apply knowledge from previous clinical learning experience under the supervision of a senior technologist. Students are tested on intermediate clinical radio diagnosis skills.

Studentship or observership must include:

- A minimum of 14 hours per week is considered as studentship in every semester.
- Provide simulation and skill labs for practicing skills specific to the program in the initial years of observership/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Third Semester

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Pathology

Subject Code: BMRIT -301

RATIONALES

Pathology helps students to learn about the advances in basic science and clinical pathology. And help students learn and classify the type of diseases, to help learn about the mechanism of action of various diseases and to gain knowledge on lab tests.

COURSE OUTCOMES

- 1) Define the term "Disease" or concepts of Diseases.
- 2) Define; classify diseases and the medical terms used.
- 3) Describe the cause and mechanism of a few common diseases they come across during their routine work.
- 4) Common changes seen in these diseased persons in different organs/tissues /body fluids.
- 5) Names of the common laboratory tests done to diagnose the diseases like examination of urine, blood, other body fluids and tissues.
- 6) Enumerate the proper methods of collection, preservation and delivery of the samples to the respective laboratories.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Introduction to Pathology, Cell membrane, Cytoplasm, contents and nucleus Various injuries – Cell changes – Reversible changes, fatty liver, hydropic changes and Irreversible changes Irreversible changes – Necrosis. Types with examples. Apoptosis Pigments – Classification. Bilirubin, melanin, pathological calcification Inflammation – Definition, classification, signs, vascular & cellular events in acute inflammation Repair and wound healing, fracture healing, complications, factors influencing healing Infectious diseases – Tuberculosis, leprosy, fungal diseases, malaria	7	10

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

II	<p>Oedema – Definition, classification, causes, pathogenesis. Pulmonary oedema, cardiac oedema, Renal oedema, Lymphedema</p> <p>Thrombosis – Definition, classification, pathogenesis, venous and arterial thrombosis, fate of thrombus</p> <p>Embolism – Definition, classification and clinical manifestations – Infarction, gangrene</p> <p>Cellular adaptations and Growth disorders: Atrophy, hypertrophy, hyperplasia, metaplasia, dysplasia and neoplasia</p> <p>Neoplasia (Tumors) – Definition, nomenclature, differences between benign and malignant tumors metastasis</p> <p>Causes (carcinogens), clinical features and lab diagnosis of cancers</p> <p>Genetics – Genetic diseases, cause, Common cytogenic diseases – Klinefelter, Downs and Turners syndrome.</p> <p>Complete urine examination – physical, chemical, microscopy of sediment Liver function tests, Renal function tests</p> <p>Cytology, FNAC, Surgical pathology, biopsy, resected specimen preservation, fixation and filling of request forms</p>	8	15
III	<p>Blood collection for investigations, anticoagulant. Sample collection, labeling, transportation to labs</p> <p>Common hematological tests – Peripheral blood smear, Haemoglobin, Packed cell volume, WBC count – variation of total and differential leukocyte count, Platelet count</p> <p>Bone marrow Aspiration and biopsy; Indications, procedure, contraindications and complications</p> <p>Anemias – Definition, classification, Iron deficiency anemia, causes, clinical features and lab diagnosis</p> <p>Megaloblastic anemia – cause, classification, diagnosis. Briefly hemolytic anemia Leukemia – Definition, classification, lab diagnosis of Acute Leukemias (AML & ALL) and Chronic Leukemias (CML & CLL)</p> <p>Bleeding disorders – Classification, Vascular, Platelet and coagulation factors contribution in clotting. Common Platelet disorders</p> <p>Common coagulation disorders (Hemophilia, DIC). BT, CT, Prothrombin time and APTT for diagnosis</p> <p>Blood grouping, cross matching, collection of blood from blood donors. Mandatory tests done in blood bank, blood components, complications of blood transfusion and its evaluation</p>	7	15

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Clinical Radiography Positioning (Part- II)

Subject Code: BMRIT -302

RATIONALE

Clinical Radiography Positioning Part-2 provides the students with knowledge of x-ray imaging, positioning and all the care that should be taken. To improve skills and knowledge on patient positioning for students' MRIT and to identify radiological pathologies and to gain knowledge on radiographic anatomy.

They also gain knowledge of image quality in radiological images and management of patients in emergency situations.

COURSE OUTCOMES

- 1) Prepare management and positioning of patients
- 2) Correlate of indications, contraindications of the patient
- 3) Understand the patient preparations needed before any radiological examination.
- 4) Generalize knowledge of post procedural care.
- 5) Students will be able position the patients for radiological procedures.
- 6) Knowledge of image quality in radiological images.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	<p>Dental Radiography Technique for intra oral full mouth. - Occlusal projections. - Extra oral projections including orthopantomography. - Supplementary techniques.</p> <p>Upper respiratory system Technique for postnasal airways, larynx, trachea, thoracic inlet, Valsalva maneuver. - Phonation.</p>	5	10
II	<p>Lung and Mediastinum: Supplementary projections: Antero-posterior, obliques, lordotic, apical projection, use of penetrated postero-anterior projection. - Expiration technique. - Technique for pleural fluid levels and adhesions.</p> <p>Abdominal viscera- Technique for plain film examination. - Projection for acute abdomen patients. - Technique to demonstrate: Foreign bodies, Imperforate anus.</p>	6	10
III	<p>Radiography using mobile X-ray equipment- Radiography in the ward: Radiography in the specialized unit, such as: Intensive care unit, Coronary care, Neonatal unit Radiography in the operating theatre.</p> <p>Mammography: Basic views, special views, wire localization.</p> <p>Localization of foreign bodies. Various techniques</p>	5	10
IV	<p>Ward /mobile radiography – electrical supply, radiation protection, equipment and instructions to be followed for portable/ward radiography.</p> <p>Operation theatre techniques: General precautions, Asepsis in techniques - Checking of mains supply and functions of equipment, selection of exposure factors, explosion risk, radiation protection and rapid processing techniques.</p> <p>Trauma radiography/Emergency radiography</p>	5	10
V	<p>Neonatal and Pediatric Radiography, Forensic Radiography Microradiography: General principles, Requirement, Equipment, Technique.</p>	5	10

Subject: Contrast and Special Radiological Procedures

Subject Code: BMRIT - 304

RATIONALE

Contrast & Special Radiological Procedures are diagnostic procedures usually performed by giving contrast through oral or intravenous to diagnose the disease.

These imaging procedures are done under the guided of fluoroscopy or c-ram equipment.

COURSE OUTCOMES

- 1) Prepare management and positioning of patients while performing radiological procedures.
- 2) Correlate of indications, contraindications, contrast media, radiation dose, exposure timing and radiation safety measures for different radiological procedures.
- 3) Understand the patient preparations needed before any radiological examination.
- 4) Generalize knowledge of post procedural care.
- 5) Students will be able position the patients for radiological procedures.
- 6) Knowledge of image quality in radiological images.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Introduction: General approach to Special Radiographic procedures, Responsibility of Radiology Technologist during radiological procedures, Preparation of patient for different procedures, Room layout in interventional radiology and fluoroscopy. Contrast Media: Positive and Negative, Ionic & Non Ionic, Adverse Reactions to contrast media and patient management. Emergency Equipment in the Radiology Department	8	10
II	Gastro Intestinal Tract: Barium Swallow; Barium Meal - Single and Double Contrast; Barium Meal Follow Through; Small Bowel Enema (Enteroclysis); Barium Enema - Gastrograffin Enema; Loopogram Biliary Tract: Oral & Intravenous Cholecystography; Percutaneous Transhepatic Cholangiography; Percutaneous Transhepatic Biliary Drainage; Endoscopic Retrograde Cholangiopancreatography	10	20

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

III	Urinary System: IVU (Intravenous Urography), Retrograde Pyeloureterography (RGU), Micturating Cysto Urethrography, Ascending Urethrography Reproductive System: HysteroSalpingogram, FTR (Fallopian Tube Recanalization)	8	20
IV	Central Nervous System: Cervical Myelography - Cisternal Puncture and Lateral Cervical Puncture, Lumbar Myelography, Myelography with water soluble and oily contrast media Respiratory System: Bronchography, Percutaneous Lung Biopsy Other procedures in radiology: Arthrography, Sialography, Lymphography, Sinography & Fistulography, Dacryocystography, Embolization & embolic agents	10	20
Total		36	70

BMRIT Radiology Clinical Education – Part III (studentship)

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel.

Students apply knowledge from previous clinical learning experience under the supervision of a senior technologist. Students are tested on intermediate clinical radio diagnosis skills.

Studentship or observership must include:

- A minimum of 14 hours per week is considered as studentship in every semesters.
- Provide simulation and skill labs for practicing skills specific to the program in the initial years of observer ship/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Fourth Semester

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Cross Sectional Anatomy

Subject Code: BMRIT - 401

RATIONALE

Cross sectional anatomy provides the students with Skills that are important to help the technologist in MRI and CT to identify the anatomy being imaged and to communicate effectively with the radiologist and physicians.

COURSE OUTCOMES

- 1) Identify cross-sectional anatomy in the sagittal, coronal and axial planes on CT and MR images.
- 2) Describe anatomical structural relationships.
- 3) Recognize normal anatomy and build a personal resource system for future study.
- 4) Locate and identify pertinent cerebral, upper thorax, mid-thorax, and abdominal anatomy.
- 5) On CT and MR images, identify anatomical structures of the body and of the head.
- 6) Distinguish between arterial and venous anatomy of the entire body's vascular system.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Introduction to Sectional Anatomy & Terminology- Sectional planes, Anatomical relationships/terminology Anatomy of the upper thorax-Surface anatomy relationships, Bony structures and muscles, Blood vessels. Divisions of the mid-thorax, heart and great vessels-Lungs, heart and great vessels, Esophagus	12	--
II	CT/MRI Images of the Thorax - Normal and abnormal imaging Anatomy of the Abdomen- Major organs and their accessories, Abdominal blood vessels CT/MR Images of Abdomen – Normal and pathologic anatomy of the Pelvis- Bony structures and associated muscles, Digestive and urinary systems Reproductive Organs - Normal and abnormal imaging	12	--

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

III	CT/MR Images of the Male/Female Pelvis- Normal and pathologic Neuro Anatomy -Scan planes Brain –Cerebral hemispheres, Sinuses, Ventricles, Brainstem and associated parts, Arterial/venous systems, Basal ganglia, Cranial nerves Spine - Vertebra and disc, Spinal cord and meninges Neck -Arterial/venous systems, Muscles, Glands and pharynx	12	--
Total		36	

SUGGESTED PRACTICAL / DEMONSTRATION

Sr. No		Hours
1.	Introduction to Sectional Anatomy & Terminology - Sectional planes, Anatomical relationships/terminology Anatomy of the upper thorax-Surface anatomy relationships, Bony structures and muscles, Blood vessels. Divisions of the mid-thorax, heart and great vessels-Lungs, heart and great vessels, Esophagus	36
2.	CT/MRI Images of the Thorax - Normal and abnormal imaging Anatomy of the Abdomen - Major organs and their accessories, Abdominal blood vessels CT/MR Images of Abdomen Normal and pathologic anatomy of the Pelvis- Bony structures and associated muscles, Digestive and urinary systems Reproductive Organs - Normal and abnormal imaging	36
3.	CT/MR Images of the Male/Female Pelvis- Normal and pathologic Neuro Anatomy -Scan planes Brain –Cerebral hemispheres, Sinuses, Ventricles, Brainstem and associated parts, Arterial/venous systems, Basal ganglia, Cranial nerves Spine - Vertebra and disc, Spinal cord and meninges Neck -Arterial/venous systems, Muscles, Glands and pharynx	36
	Total	108

4	Fundamentals of Sectional Anatomy: An Imaging Approach	Denise L. Lazo	Cengage Learning

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Modern Radiological Imaging Equipment and Physics

Subject Code: BMRIT - 402

RATIONALE

Modern radiological Imaging Equipment and Physics provides the students knowledge about the modern x-ray equipment and working principle. Modern imaging techniques – including X-rays, ultrasound, CT scans and MRI – can show structures inside your body in great detail.

Radiologic Physics is the study of medical imaging components, technology, and parameters in an effort to produce optimal imaging results.

COURSE OUTCOMES

- 1) Describe the special radiological equipments
- 2) Describe the digital and computed radiography
- 3) Describe PACS, RIS and HIS
- 4) They will learn how to operate and maintain modern equipment safely and effectively.
- 5) Learners will understand radiation protection principles to ensure patient and operator safety.
- 6) The course will train students to analyze and interpret medical images for diagnostic purposes.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Modern x-ray tube. Digital Mammography and Tomosynthesis, Stitch radiography, Dual energy x-ray absorptionmetry (DEXA) scan.	9	20
II	Computed radiography: its principle, physics & equipment. Digital Radiography: its principle, physics & equipment. Flat panel digital fluoroscopy and radiography system, Direct and indirect digital radiography and fluoroscopy systems. Digital radiography and Computed radiography its advantages, disadvantages and applications. Digital Portable and mobile x-ray units.	9	20
III	Modern dental equipments. Cone beam dental CT.	9	20
IV	Picture archiving and communication system (PACS), RIS and HIS.	9	10
Total		36	70

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

SUGGESTED PRACTICALS/DEMONSTRATION

Sr. No		Hours
1.	Modern x-ray tube. Digital Mammography and Tomosynthesis, Stic radiography, Dual energy x-ray absorptiometry (DEXA) scan.	9
2.	Computed radiography: its principle, physics & equipment. Digital Radiography: its principle, physics & equipment. Flat panel digital fluoroscopy and radiography system, Direct and indirect digital radiography and fluoroscopy systems. Digital radiography and Computed radiography its advantages, disadvantages and applications. Digital Portable and mobile x-ray units.	9
3.	Modern dental equipments. Cone beam dental CT.	9
4.	Picture archiving and communication system (PACS), RIS and HIS.	9
	Total	36

QUESTION PAPER BLUEPRINT

Unit		Marks ($\pm 5\%$)
1.	Modern x-ray tube. Digital Mammography and Tomosynthesis, Stic radiography, Dual energy x-ray absorptiometry (DEXA) scan.	25
2.	Computed radiography: its principle, physics & equipment. Digital Radiography: its principle, physics & equipment. Flat panel digital fluoroscopy and radiography system, Direct and indirect digital radiography and fluoroscopy systems. Digital radiography and Computed radiography its advantages, disadvantages and applications. Digital Portable and mobile x-ray units.	25
3.	Modern dental equipment's. Cone beam dental CT.	25
4.	Picture archiving and communication system (PACS), RIS and HIS.	21
	Total Marks (including optional questions)	96

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Interventional Radiology Techniques

Subject Code: BMRIT -403

RATIONALES

Interventional radiology (IR) helps student MRIT to gain about the basics diagnostics and interventional procedures and to learn procedures in modalities like digital radiography CT and MRI and nuclear medicine and to increase the level of understandings and knowledge required to meet current radiologic procedures and to understand the physical principles of radiography and basic radiography positioning to perform the procedures.

It a medical specialty that performs various minimally-invasive procedures using medical imaging guidance, such as x-ray fluoroscopy, computed tomography, magnetic resonance imaging, or ultrasound. IR performs both diagnostic and therapeutic procedures through very small incisions or body orifices

COURSE OUTCOMES

- 1) Know the basic principle and physics of interventional equipment.
- 2) Know the management and positioning of patients while performing interventional radiological procedure.
- 3) Have knowledge about the indications, contraindications, contrast media, radiation dose, and exposure timing and radiation safety measures for the different interventional radiological procedure.
- 4) Understand the patient preparation needed before any interventional radiological procedures.
- 5) Have knowledge about the post procedural care and safety.
- 6) The course will train students to analyze and interpret interventional radiological procedure.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Introduction to interventional procedures DSA: basic principles and types Equipment: Basics of angiographic equipment, single and biplane angiographic equipment's, angiographic table, image intensifier, flat panel detectors, recording systems, pulse oximetry, cardiac resuscitation measure-ECG, pressure injector, catheters, needle and other tools, 3D rotational angiography, image processing, patient monitor, CO2 angiography	6	15

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Patient Care in radiology

Subject Code: BMRIT - 404

RATIONALE

Patient management is based on team work, it is essential that the student should appreciate the technologist's role and that the importance of co-operation with wards and other departments.

The students should be attached to wards or the accident and emergency department for a definite training period.

COURSE OUTCOMES

- 1) Understand the responsibility of the imaging technologist and other health care facility.
- 2) Understand the management and care of patient during different procedures and emergency situations.
- 3) Know about different patient transfer techniques and to restrain the uncooperative patients during radiological examination
- 4) Differentiate the types of consent forms
- 5) Know about infection control, infection source and isolation techniques.
- 6) Describe sterilization techniques.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Introduction to Patient Care: Responsibilities of Medical Imaging Technologist, Obtaining Consents and history for different radiological examinations, Patient transfer and Restraining techniques, Obtaining vital signs, Ergonomics and body mechanism Communication: Patient education, Communication with the patient, Professional role and behavior	2	10
II	Hospital procedure: Hospital staffing and organization; records relating to patients and departmental statistics; professional attitude of the technologist to patients and other members of the staff; medico- legal aspects; accidents in the departments, appointments, organization; minimizing waiting time; out-patient and follow-up clinics; stock-taking and stock keeping.	2	10

[Handwritten signatures and marks in blue ink at the bottom of the page]

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

III	<p>Care of the patient : FIRST contact with patients in the department; management of chair and stretcher patients and aids for this, management of the unconscious patient; elementary hygiene; personal cleanliness; hygiene in relation to patients.</p>	3	10
IV	<p>Nursing procedures in Radiology: Injection- methods and their routes of administration, Clothing of patient, Administering rectal enema.</p> <p>First aid: Aims and objectives of first aid; wounds and bleeding, dressing and bandages; pressure and splints, supports etc. Shock; insensibility; asphyxia; convulsions; resuscitation, use of suction apparatus, drug reactions; prophylactic measures; administration of oxygen; electric shock; burns; scalds; hemorrhage; pressure points; compression band. Fractures; splints, bandaging; dressing, foreign bodies; poisons.</p>	3	10
V	<p>Infection: Bacteria, their nature and appearance; spread of infections; auto-infection or cross-infection; the inflammatory process; local tissue reaction, general body reaction; ulceration; asepsis and antisepsis. Universal precautions, hospital acquired infections- HIV, Hepatitis B, C, and MRSA etc.</p> <p>Principles of asepsis: Sterilization - methods of sterilization; use of central sterile supply department; care of identification of instruments, surgical dressings in common use, including filamented swabs, elementary operating theatre procedure; setting of trays and trolleys in the radio imaging department (for study by radio imaging students only)</p>	3	10
VI	<p>Patient care in following investigations: GIT, Respiratory system, Cardiovascular system, CNS; Sterilization; Infection control</p> <p>Departmental procedures: Department staffing and organizations; records relating to patients and departmental statistics; professional attitudes of the technologist to patients and other members of the staff, medico-legal aspects accidents in the department; appointments; organisations; minimizing waiting time; out-patient and follow-up clinics; stock taking and stock keeping.</p>	2	10
VII	<p>Drugs in the department and Storage: classification; labelling and checking, regulations regarding dangerous and other drugs; units of measurement, special drugs, anti-depressive, anti-hypertensive etc. crash cart.</p> <p>Medical ethics and records: Medico legal implication of MLC cases, Importance of consent, Consent in detail, Precaution while dealing with female patient, Medical records</p>	3	10

BMRIT Radiology Clinical Education – part IV (studentship)

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel.

Students apply knowledge from previous clinical learning experience under the supervision of a senior technologist. Students are tested on intermediate clinical radio diagnosis skills.

Studentship or observership must include:

- A minimum of 14 hours per week is considered as studentship in every semesters.
- Provide simulation and skill labs for practising skills specific to the program in the initial years of observership/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Fifth Semester

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Basics Techniques in CT Technology

Subject Code: BMRIT - 501

RATIONALE

Basics techniques in CT Technology provide the students with knowledge of the basic physics of CT.

It creates relationship between scan and patient with various CT protocols for better representation of images.

COURSE OUTCOMES

- 1) Define basic principle and physics of Computed Tomography scan
- 2) Recognize protocols needed for Computed Tomography examination
- 3) Prepare and positioning for Computed Tomography examination
- 4) Interpret post processing of raw Computed Tomography images
- 5) Prepare and position the patients for Computed Tomography examination
- 6) Systematize post processing for Computed Tomography scan

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency.

Unit	Topic and contents	Hours	Marks
I	Introduction and history, CT principle, CT generations, CT Instrumentation, CT detectors, Axial & Helical CT – Slip ring technology	15	20
II	Data acquisition, Image pre-processing/reconstruction techniques, Algorithms for image reconstruction, Image display, Image post-processing techniques, CT artifacts, Image quality	14	10
III	CT Protocols for different body parts & Dental scan, CT Protocols for Angiography & Perfusion, CT contrast media and administration, CT guided interventional procedures	14	15

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

IV	Multi-detector CT Isotropic imaging, Cardiac CT, Flash CT, Advanced CT scanners, Dual energy & Dual Source Scanners, CT-fluoroscopy	15	15
V	Safety consideration, Documentation in CT, Role of Medical Imaging technologist in CT scan procedures, Quality assurance in CT	14	10
Total		72	70

SUGGESTED PRACTICAL / DEMONSTRATION

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Radiation Safety in Diagnostic Radiology

Subject Code: BMRIT - 502

RATIONALE

Radiation protection aims to reduce unnecessary radiation exposure with a goal to minimize the harmful effects of ionizing radiation. In the medical field, ionizing radiation has become an inescapable tool used for the diagnosis and treatment of a variety of medical conditions .

To study radiation physics relevant to radiation protection to gain information on radiation types and does receive to study the molecular and cellular effects of radiations and to know the radiation quantities units dose limits and regulatory bodies to know about equipment design for radiation protection and to implement patient and personnel radiation protection practices for radiological procedures

COURSE OUTCOMES

- 1) Aim and need of radiation protection
- 2) Introduction to Radiation units and quantities
- 3) Understanding of various Radiation protection regulations and the dose limits
- 4) Layout of Radiology department
- 5) Use of protective devices and awareness of radiation with radiation signages
- 6) Dose reduction measures with technical protective considerations during radiology.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Radiation Quantities and Units: Radiation- Radioactivity- Sources of radiation - natural radioactive sources -cosmic rays terrestrial radiation - - man made radiation sources. Units of radiation - Quality factor - Flux-Fluence-Kerma- Exposure- Absorbed dose- Equivalent Dose- Weighting Factors-Effective Dose - Occupational Exposure Limits - Dose limits to public.	7	15
II	Biological Effects of radiation: Ionization, excitation and free radical formation, hydrolysis of water, action of radiation on cell-Chromosomal aberration and its application for the biological dosimetry- Effects of whole body and acute irradiation, dose fractionation, effects of ionizing radiation on each of major organ system including fetus -Somatic effects and hereditary effects- stochastic and deterministic effects-Acute exposure and chronic exposure-LD50 - factors affecting radio sensitivity. Biological effects of non-ionizing radiation like ultrasound, lasers, IR, UV and magnetic fields.	8	15

(Handwritten signatures and initials)

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

III	<p>Radiation detection and Measurements: Ionization of gases- Fluorescence and Phosphorescence -Effects on photographic emulsion. Ionization Chambers – proportional counters- G.M counters- scintillation detectors – liquid semiconductor detectors – Gamma ray spectrometer. Measuring systems – free air ionization chamber – thimble ion chamber – condenser chamber – Secondary standard dosimeters – film dosimeter – chemical dosimeter- Thermoluminescent Dosimeter. -Pocket dosimeter-Radiation survey meter- wide range survey meter -zone monitor-contamination monitor -their principle function and uses. Advantages & disadvantages of various detectors &its appropriateness of different detectors for different type of radiation measurement. Dose and Dosimetry, CT Dose Index (CTDI, etc.), Multiple Scan Average Dose (MSAD), Dose Length Product (DLP), Dose Profile, Effective Dose, Phantom Measurement Methods, Dose for Different Application Protocols, Technique Optimization. Dose area product in fluoroscopy and angiography systems, AGD in mammography</p> <p>Artificial Intelligence in Radiation Safety</p>	7	15
IV	<p>Radiation protection: Radiation protection of self and patient- Principles of radiation protection, time - distance and shielding, shielding - calculation and radiation survey –ALARA- personnel dosimeters (TLD and film batches) - occupational exposure.</p>	7	10
V	<p>Radiation Hazard evaluation and control: Philosophy of Radiation protection, effects of time, Distance & Shielding. Calculation of Work load, weekly calculated dose to radiation worker & General public Good work practice in Diagnostic Radiology. Planning consideration for radiology, including Use factor, occupancy factors, and different shielding material.</p>	7	15

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Quality Assurance in Diagnostic Radiology and Regulatory Requirements

Subject Code: BMRIT -503

RATIONALE

Quality assurance testing includes the monitoring, evaluation and maintenance of equipment for optimal performance and stability. It is essential that radiological technologists recognize, record and report, according to policy, when a significant increase or underexposure in radiation exposure occurs.

COURSE OUTCOME

- 1) Aim and need of radiation protection
- 2) Introduction to quality assurance
- 3) Understanding of regulatory requirements
- 4) Follow radiation protection regulations and apply practically
- 5) Students will develop skills in planning and quality assurance.
- 6) Students will understand about personnel and area monitoring.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	<p>Objectives of quality Control: Improve the quality of imaging thereby increasing the diagnostic value; to reduce the radiation exposure; Reduction of film wastage and repeat examination; to maintain the various diagnostic and imaging units at their optimal performance. Quality assurance activities: Equipment selection phase; Equipment installation and acceptance phase; Operational phase; Preventive maintenance.</p> <p>Quality assurance programme at the radiological faculty level: Responsibility; Purchase; Specifications; Acceptance; Routine testing; Evaluation of results of routine testing; Quality assurance practical exercise in the X ray generator and tube; Image receptors from processing; Radiographic equipment; Fluoroscopic equipment; Mammographic equipment; Conventional tomography; Computed tomography; Film processing, manual and automatic; Consideration for storage of film and chemicals; Faults tracing; Accuracy of imaging- image distortion for digital imaging devices. LASER printer calibration</p>	4	---

BMRIT Radiology Clinical Education – part V (studentship)

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel.

Students apply knowledge from previous clinical learning experience under the supervision of a senior technologist. Students are tested on intermediate clinical radio diagnosis skills.

Studentship or observership must include:

- A minimum of 14 hours per week is considered as studentship in every semesters.
- Provide simulation and skill labs for practicing skills specific to the program in the initial years of observership/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Sixth Semester

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Basics Techniques in MRI Technology

Subject Code: BMRIT - 601

RATIONALE

Magnetic Resonance Imaging (MRI) is a non-invasive imaging technology that produces three dimensional detailed anatomical images. It is often used for disease detection, diagnosis, and treatment monitoring.

It is based on sophisticated technology that excites and detects the change in the direction of the rotational axis of protons found in the water that makes up living tissue. The student learns to Recognize and planning different protocols and prepare and position patients for MRI examination. To gain knowledge on Management of patients, contrast reactions MRI Safety.

COURSE OUTCOMES

- 1) Define basic principle and physics of Magnetic Resonance Imaging.
- 2) Recognize protocols needed for Magnetic Resonance Imaging examination.
- 3) Prepare and positioning for Magnetic Resonance Imaging examination.
- 4) Interpret post processing of Magnetic Resonance Imaging images.
- 5) Prepare and position the patients for Magnetic Resonance Imaging examination.
- 6) Plan of post processing for Magnetic Resonance Imaging data.

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency.

Unit	Topic and contents	Hours	Marks
I	Introduction to MRI; Basic principle; Image weighting and contrast in MRI; Instrumentation of MRI-Magnets- classification, types, advantages, disadvantages, Gradient & Body Coils, RF coils, Shim coils, Ramping, Cryogen, RF shielding	12	15
II	Encoding and Image formation-Encoding, K-Space; Parameters and Trade-offs; MRI Pulse sequences-Spin Echo pulse sequence, Gradient Echo pulse sequence; Fast imaging sequences	12	15
III	Flow phenomena; Flow phenomena compensation; Vascular Imaging-Digital Subtraction MRA, TOF-MRA, PC-MRA, Velocity Encoding, MR-Angiogram, MR- Venogram	10	10
IV	Cardiac Imaging; Whole body MRI Protocols; MRI Artifacts and their compensation; MRI contrast agents-T1 contrast agent, T2 contrast agent	10	15

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

V	MRI safety- Implants and pace-makers, Electrical safety, Metallic safety, Instrumental safety, Bio-effects of MRI; Documentation; Quality assurance in MRI	10	15
Total		54	70

SUGGESTED PRACTICALS/DEMONSTRATION

Sr. No	Topic and contents	Hours
1.	Instrumentation of MRI-Magnets- classification, types, advantages, disadvantages, Gradient & Body Coils, RF coils, Shim coils, Ramping, Cryogen, RF shielding	30
2.	MRI Pulse sequences-Spin Echo pulse sequence, Gradient Echo pulse sequence; Fast imaging sequences	30
3.	Flow phenomena; Flow phenomena compensation	24
4.	Whole body MRI Protocols; MRI Artifacts and their compensation	30
5.	MRI safety and Quality assurance in MRI	30
Total		144

QUESTION PAPER BLUEPRINT

Unit		Marks (±5%)
1.	Instrumentation of MRI-Magnets- classification, types, advantages, disadvantages, Gradient & Body Coils, RF coils, Shim coils, Ramping, Cryogen, RF shielding	19
2.	MRI Pulse sequences-Spin Echo pulse sequence, Gradient Echo pulse sequence; Fast imaging sequences	20
3.	Flow phenomena; Flow phenomena compensation	19
4.	Whole body MRI Protocols; MRI Artifacts and their compensation	19
5.	MRI safety and Quality assurance in MRI	19
Total Marks (including optional questions)		96

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Introduction to Nuclear Medicine Techniques

Subject Code: BMRIT -602

RATIONALE

It is the branch of medicine that deals with the use of radioactive substances in research, diagnosis, and treatment disease. In this student will learn about the fundamentals of radioactivity and various interactions of radiation with matter, radiopharmaceuticals, instrumentations measuring radioactivity, PET imaging and patients care and safety.

COURSE OUTCOMES

- 1) Define basic principle and physics of nuclear medicine.
- 2) Apply precautions while handling radiopharmaceuticals.
- 3) Recognizing the artefacts associated with nuclear medicine.
- 4) Assess the knowledge of improving image quality in nuclear medicine.
- 5) Management of patient for any late reactions associated with radiotracers in nuclear medicine.
- 6) Assess the knowledge of Nuclear medicine Techniques.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	History; Isotopes and Radionuclides- Production of Radionuclides, Transport of Radionuclides; Radio Activity- Radio Active transformations, Specific Activity; Radiopharmaceuticals-Preparation, Precautions while handling	7	25
II	Gamma Camera instrumentation - Collimator- classification and types; Single Photon Emission Computed Tomography (SPECT); Positron Emission Tomography (PET); Advanced techniques in NM - SPECT-CT, PET-CT, PET-MRI	7	25
III	Safety Considerations & Radiation Dose in Nuclear Medicine; Room layout in nuclear medicine	4	20
Total		18	70

(Handwritten signatures and marks)

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Ultrasound Techniques Subject Code: BMRIT -603 RATIONALES

Ultrasound techniques provide students' knowledge on the basic principles of ultrasonography and how to prepare the patients for the scan and also to identify any artifacts.

To learn about the physics behind ultrasound and to gain knowledge regarding various ultrasound procedures equipment used in ultrasound and patient care during ultrasound procedures

COURSE OUTCOMES

- 1) Describe the Ultrasound properties, interaction of ultrasound with matter.
- 2) Describe the transducer and types.
- 3) Explain the concepts of image display.
- 4) Describe Doppler imaging and ultrasound contrast agents.
- 5) Describe the image characteristics and artifacts.
- 6) Explain the safety considerations in ultrasound and protocols.

THEORY COMPONENTS

Unit	Topic and contents	Hours	Marks
I	Ultrasound: Properties of ultrasound, interaction of ultrasound with matter	6	10
II	Transducers: Types of transducers, advances in the design of modern ultrasound transducers	6	15
III	Image display: Display modes, ultrasound instrumentation, controls, image storage, scan converter memory, photographic film, multi format camera, laser imager, colour and video thermal printer, computer storage, pre and post processing techniques	6	10
IV	Doppler Imaging: Doppler principles, continuous wave Doppler and pulsed Doppler, duplex scanning, colour flow imaging, power Doppler, harmonic imaging, extended field of view Ultrasound contrast agents	6	15
V	Image characteristics and artefacts: vascular, interventional, intraoperative and ophthalmic ultrasonography, 3D and 4D ultrasound imaging Artificial Intelligence in Ultrasound	6	10
VI	Bio-effects and safety considerations in ultrasound, ultrasound system performance measurements, ultrasound equipment quality assurance – conventional Doppler system testing and documentation	6	10
Total		36	70

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Subject: Biostatistics and Research Methodology

Subject Code: BMRIT -604

RATIONALES:

The application of statistical technique to scientific research in health related field, including medicine, biology, and public health and the development of new tools to study these areas.

COURSE OUTCOMES

- 1) Graduates will learn how to **identify** research problems and how statistics are useful in research.
- 2) Students will be able to **classify** the research problems, and which type of research is required.
- 3) Students will **apply modern** statistical tools for analyzing the research data.
- 4) Students will be able to **analyze** the data with the help of biostatistics, find correlation, variance.
- 5) The students will be able to **evaluate** various measurements of central tendency for collected data in MS Excel.
- 6) The students will **design the research methodology** and how it will be implemented in their research.

G.P.
Pratishtha Per Naloy

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

THEORY COMPONENTS

Unit	Topic and contents	Hours
I	Introduction: Meaning, Definition, Characteristics of Statistics; Importance of the Study of Statistics. Branches of Statistics; Descriptive and Inferential Statistics; Variables and Their Types. Measurement Scales.	3
II	Tabulation of Data: Raw Data, the Array, Frequency Distribution. Basic Principles of Graphical Representation; Types of Diagrams - Histograms, Frequency Polygons, Smooth Frequency Polygon, Commutative Frequency Curve, O give; Normal Probability Curve.	3
III	Measure of Central Tendency: Need For Measures of Central Tendency; Definition and Calculation of Mean; Ungrouped and Grouped Meaning, Interpretation and Calculation of Median Ungrouped and Grouped; Meaning and Calculation of Mode; Comparison of the Mean, and Mode; Guidelines for the Use of Various Measures of Central Tendency	3
IV	Measure of Variability: Need For Measure of Dispersion. The Range, the Average Deviation, The Variance and Standard Deviation; Calculation of Variance and Standard Deviation, Ungrouped and Grouped.	3
V	Probability and Standard Distributions: Meaning of Probability of Standard Distribution, The Binominal Distribution. The Normal Distribution; Divergence from Normality - Skewness, Kurtosis.	3
VI	Sampling Techniques: Need For Sampling - Criteria for Good Samples. Application of Sampling in Community, Procedures of Sampling and Sampling Designs Errors. Sampling Variation and Tests of Significance.	3
Total		18

BMRIT Radiology Clinical Education – part IV (studentship)

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel. Students apply knowledge from previous clinical learning experience under the supervision of a senior technologist. Students are tested on intermediate clinical radio diagnosis skills.

Studentship or observer ship must include:

- A minimum of 14 hours per week is considered as studentship in every semester.
- Provide simulation and skill labs for practicing skills specific to the program in the initial years of observer ship/studentship.
- Every semester must have seminars/workshops on new developments/ technologies. Check annexure for marking criteria.
- If the clinical facility is not within the same campus, transportation should be provided to the students and interns.
- All practical skills must be supervised and recorded in a Logbook and skills to be evaluated after the completion of the internship.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

Skills based outcomes and monitor able indicators for Medical Radiology and Imaging Technologist during internship:

S.no.	Learning outcomes	Knowledge/comprehension	Applications / synthesis /evaluation	Hours
1	Be able to interpret and evaluate a prescription	Identify the area for treatment.	Determining x-ray, CT scan or MRI scan needs of patient	200
		Quantify the practical problems associated with machine and accessory equipment limitations	Understand and interpret instructions and requirements documented by the physician in the patient's prescription	
2	Operate and oversee operation of radiologic equipment	Selecting and performing basic views (projections) and conventional contrast studies using appropriate radiographic parameters and equipment	Reliably perform all non-contrast plain Radiography, conventional contrast studies and non-contrast plain radiography in special situations	200
		Carrying out routine procedures for troubleshooting and maintenance of imaging and processing systems	Control and manipulate parameters associated with exposure and processing to produce a required image of desirable quality	
			Apply quality control procedures for all radiologic equipment	
3	Be able to transfer all relevant information and complete accurate documentation	Recognize the importance of accurate transfer of information to allow for accurate treatment setup according to the treatment plan and prescription	Construct the most appropriate device for the individual patient within the context of the protocol	100
		Know what should be included	Apply the necessary precautions in production	
		Know to whom or where the documentation and information should be sent	Implement correct QC, storage and handling procedures for shielding devices	
		Be aware of the legal issues relating to documentation		
4		Know the shielding devices/methods available	Construct the most appropriate device for the	100

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

S. no.	Learning outcomes	Knowledge/comprehension	Applications / synthesis /evaluation	Hour s
	Be able to prepare the diagnostic machinery		individual patient within the context of the protocol	
		Know how to use these devices	Apply the necessary precautions in production	
		Recognize the associated health and safety issues	Implement correct QC, storage and handling procedures for immobilization devices	
5	Be able to carry out the daily organization of the treatment unit	Recognize the importance of team interactions	Participate in the organization of the daily work schedule to maximize efficiency	100
		Explain the principles of effective communication	Inform the patient about the procedure	
		Review the individual patient requirements		
6	Be able to accurately and consistently set-up and produce a good quality radiological image	Able to interpret the set-up information	Interpret the diagnostic plan and set-up the patient accordingly	200
		Apply knowledge of radiographic imaging to the production of radiographs and the assessment of image quality	Carrying out quality control tests on images obtained	
7	Be able to prepare position and the patient for the procedure	Be familiar with the treatment plan	Explain the anatomic and physiological basis of the procedure to be undertaken	200
		Identify preparatory procedures	Identify and explain the possible side effects to each patient	
		Be familiar with the diagnostic plans for all patients on the treatment unit	Check all preparatory procedures have been completed Identify the patient in accordance with recognized procedures and consistent with the department protocol	

[Handwritten signatures and marks in blue ink at the bottom of the page]

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

S. no.	Learning outcomes	Knowledge/comprehension	Applications / synthesis /evaluation	Hour s
		Recognize the signs and symptoms associated with treatment in different sites	Analyze the information and integrate to define the optimal patient position	
		Discuss the importance of patient identification and how it should be carried out	Interpret the diagnostic plan and use the equipment accordingly	
8	Be able to complete accurate treatment documentation	Recognize the importance of accurate documentation	Complete the treatment documentation accurately	50
		Know what should be included	Ensure all legal requirements have been met	
		Be aware of the legal issues relating to treatment documentation		
		List support groups that might benefit patients		
9	Advise patient on appropriate nutrition, sexual function, rest, skin care, nausea and other symptoms	Explain the impact of nutritional status on patient tolerance of treatment	Assess the patient's nutritional status	50
10	Monitor and assure quality	Monitor treatment process/outcomes	Identify needs and expectations of patient/health care professionals	50
		Identify problems in treatment process/outcomes	Solve treatment process/outcome problems	
		Know what patient care is relevant for the procedure	Evaluate potential solutions thoroughly	
11	Be able to carry out the necessary data transfer checks	Define and explain the data that must be transferred	Check and verify all parameters	100
			Confirm approval and signatures	
12	Be able to process radiographic images	Apply knowledge of radiographic imaging to the production of radiographs and the assessment of image quality	Perform X-ray film / image processing techniques (including dark room techniques)	100

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

		Control and manipulate parameters associated with exposure and processing to produce a required image of desirable quality	Acquire an appropriate image as per instructions	
13	Recognize contrast induced adverse reactions	Promptly recognize and assess the reactions	Know the correct medications and other treatment options	100
		Taking precautionary measures to avoid the reactions	Recognise the contraindications of allergic reactions	
14	Be able to carry out corrective actions as per instructions	Recognize the critical structures on the verification images	Make corrections in accordance with the protocol	100
		Identify the correct imaging protocol	Record any corrections	
15	Be able to implement health and safety procedures	Explain the health and safety issues for patients and staff	Assess the safety features to ensure they are in place and adhered to	100
16	Be able to interpret, apply and disseminate information as a member of the medical imaging team	Define and explain the data that must be disseminated	Identify the appropriate personnel to whom specific information should be disseminated	100
			Communicate the correct, relevant and appropriate information	
17	Be able to demonstrate professional behaviour	Explain the legal and ethical guidelines related to the profession	Practice in accordance with legislation regulations and ethical guidelines	100
		Be aware of your own competency levels	Promote collaborative practice	
		Identify the elements that reflect professional appearance and manner		
18	Be able to demonstrate a sensitive and caring attitude to patients	Explain the components of good communication	Self-awareness of their own personality traits	100
		Describe the main personality types	Analyze how the differences in personality influence approach	

Bachelor in Medical Radiology and Imaging Technology (BMRIT)

		Be aware of the patient 'gender, age, cultural background, educational level and social situation		
19	Be able to ensure radiation protection legislation is adhered to	Describe the radiation hazards and how they are managed	Routinely inspect the area to ensure that radiation protection measures are in place and functional	100
		Explain the legislation relating to radiation protection		
20	Be able to carry out the daily/weekly Quality Control (QC) checks	Explain Quality Management System (QMS), Quality Assurance (QA) and Quality Control (QC)	Perform the daily/weekly/monthly QC procedures	100
21	Be able to review the literature	Define search terms for specific treatment sites	Identify the appropriate literature in the area of interest	100
22	Be able to suggest implementation of research findings	Identify relevant sources of Research	Evaluate research with respect to current departmental practice	50
23	Be able to suggest/ initiate topics for medical imaging research	Identify literature to support research proposal	Review the literature in the area	50
		Define the necessary steps in preparing and carrying out research	Formulate a research question	

ANNEXURES
MONITORING LEARNING PROGRESS

It is essential to monitor the learning progress of each candidate through continuous appraisal and regular assessment. It not only helps teachers to evaluate students, but also students to evaluate themselves.

The monitoring be done by staff of the department based on participation of students in various teaching/ learning activities. It may be structured and assessment shall be done using checklists that assess various aspects. Model checklists are given which may be copied and used.

The learning out comes to be assessed should include:

- A. Acquisition of knowledge: the methods used comprise of 'Log Book' which records participation in various teaching/ learning activities and mentoring of students. The number of activities attended and the number in which presentations are made are to be recorded. The log book should periodically be validated by the supervisors. Some of the activities are listed.
- B. Seminars/ symposia: the topics should be assigned to the student well in advance to facilitate in depth study. The ability to do literature search, in depth study, presentation skills and use of audio-visual aids are to be assessed using a checklist (*see Model Checklist*).
- C. Work diary/ Log Book- every candidate shall maintain a work diary and record his participation in the training programmes conducted by the department such as journal reviews, seminars, etc. Special mention may be made of the presentations by the candidate as well as details of experiments or procedures, if any conducted by the candidate.
- D. Records: records, log books and marks obtained in tests will be maintained by the Head of the Department and will be made available to the University.

Log Book

The log book is a record of important activities of the candidates during his training. Internal assessment should be based on the evaluation of log book. Collectively, log books are a tool for the evaluation of training programme of the institution by external agencies.

The record includes academic activities as well as the presentations and procedures carried out by the candidate.

Procedure for defaulters: every department should have a committee to review such situations. The defaulting candidate is counseled by the guide and head of the department. In extreme cases of default the departmental committee may recommend that defaulting candidate be withheld from appearing the examination, if he fails to fulfill the requirements inspite of being given adequate chances to set himself right.

Bachelor in Medical Radiology and Imaging Technology (BMRIT)
